Contents

Abbreviations	i
Executive summary	iii
1. Introduction	1
1.1 Overview	1
1.2 Regional and local context	2
1.3 Legislative context	4
1.4 Scope of the working paper	8
1.5 Working paper contributors	9
1.6 Report structure	10
2. Methods	11
2.1 Definitions of relevant areas	11
2.2 Literature review	11
2.3 Field investigations	13
2.4 Groundwater dependent ecological communities	23
3. Description of the existing environment	25
3.1 Regional context	25
3.2 Vegetation communities	29
3.3 Overall condition of vegetation within the study area	39
3.4 Terrestrial noxious and environmental weeds	40
3.5 Flora diversity	40
3.6 Threatened terrestrial flora	42
3.7 Endangered ecological communities	43
3.8 Terrestrial fauna habitats	46
3.9 Fauna assemblages	61
3.10 Threatened terrestrial fauna	66
3.11 Migratory species	72
3.12 Aquatic habitats	72
3.13 Aquatic fauna	77
3.14 Threatened aquatic species	87
3.15 Protected aquatic species	89
3.16 Listed wetlands	89
3.17 Groundwater dependent ecological communities	90

4.	Impacts on biodiversity	95
4.1	Overview	95
4.2	Loss of native vegetation	95
4.3	Loss of threatened plants	97
4.4	Loss of fauna habitat	97
4.5	Habitat fragmentation	100
4.6	Barrier effects, road mortality and impacts on fauna movements and populations	101
4.7	Fauna mortality during construction	105
4.8	Edge effects	105
4.9	Weeds	106
4.10	Changed hydrology	106
4.11	Aquatic habitat disturbance	106
4.12	Mangroves and seagrasses	108
4.13	Wetlands	110
4.14	Groundwater dependent ecological communities	111
4.15	Regional cumulative impacts	113
4.16	Key threatening processes	118
5.	Assessment of significance of impacts	123
5.1	Assessments of significance under Part 3A of the EP&A Act	123
5.2	Assessments of significance under the EPBC Act	123
6.	Mitigation and management	131
6.1	Minimising vegetation clearance and habitat loss	131
6.2	Managing edge effects and weeds	136
6.3	Fragmentation, terrestrial barrier effects and road mortality	136
6.4	Minimising impacts on aquatic ecology	154
6.5	Offsets	158
7.	Conclusions	161
7.1	Summary of key findings	161
7.2	Key thresholds	162
7.3	Concluding statement	164
8.	References	165

Table Index

Table 2-1	Field surveys conducted to assess potential impacts of the Proposal	13
Table 2-2	Survey methods and effort	21
Table 3-1	Threatened flora and fauna in bioregions	26
Table 3-2	Vegetation communities in the Proposal footprint	30
Table 3-3	Flora species recorded in different plant categories for each section of the study area	41
Table 3-4	Threatened plant species with the potential to occur in the study area	42
Table 3-5	Koala feed trees found in the study area	47
Table 3-6	Locally significant flora species in Rawdon Creek Nature Reserve	56
Table 3-7	Wildlife corridors within the study locality	59
Table 3-8	Threatened fauna species recorded during field surveys or considered likely to occur in the study area	66
Table 3-9	Migratory fauna species recorded during field surveys or considered likely to occur in the study area	72
Table 3-10	Main watercourses and State listed wetlands in study area	73
Table 3-11	Vegetation in existing riparian corridors	76
Table 3-12	Overall fish catch for each watercourse sampled	78
Table 3-13	Mangrove species assemblages and densities	89
Table 3-14	Likely groundwater dependence and influence of vegetation communities within the Proposal footprint	91
Table 4-1	Vegetation clearance	96
Table 4-2	Extent of impact on endangered ecological communities in the Proposal footprint	97
Table 4-3	Potential fauna habitat loss	98
Table 4-4	Estimated worst case scenario impacts of the Proposal on protected marine vegetation at the Hastings and Wilson river crossings	109
Table 4-5	Potential general impacts on groundwater dependent ecological communities	111
Table 4-6	Extent of endangered ecological communities within the Mid-North Coast Region of NSW	114
Table 4-7	Proportion of the total area of endangered ecological communities in the Mid-North Coast Region of NSW affected by the Proposal	115

Table 4-8	Extent of native vegetation disturbance associated with the Pacific Highway Upgrade Program	115
Table 4-9	Assessment of the contribution of the Proposal to key threatening processes	118
Table 5-1	Summary of significance assessments for endangered ecological communities, threatened and migratory species	124
Table 6-1	Fallen log benchmarks	132
Table 6-2	Details of proposed fauna crossings	137
Table 6-3	Guidelines for providing fish passage in culverts, fishways and regulators	155

Figure 3	Fauna survey site locations	6
Figure 4a-b	Regional forest ecosystem mapping	6
Figure 5a-f	Vegetation communities and endangered ecological communities in the Proposal boundary	6
Figure 6	Unconfirmed scented acronychia locations	6
Figure 7	Koala road kill locations	6
Figure 8	Fauna habitat ranking	6
Figure 9	Wildlife corridors and key habitats in the study locality	6
Figure 10	Threatened fauna recorded in the study area during surveys	6
Figure 11	Aquatic habitats – State listed wetlands, seagrasses and mangroves	6
Figure 12a-c	Fauna crossings	6
Figure 13	Example of floppy-top fencing	6

Appendices

- A. NSW DECCW Wildlife Atlas database search results
- B. EPBC Act Protected Matters report
- C. Other database searches for species of conservation significance
- D. Methodology
- E. Assessment of likelihood of threatened species occurring in the study area
- F. Flora species recorded in the study area
- G. Fauna species recorded in the study area
- H. Description of vegetation communities in the study area
- I. Part 3A assessments of significance
- J. EPBC Act assessment
- K. Species list for Lower North Coast fauna assemblages
