Appendix B Monitoring Data Summary

Glossary / Abbreviations

ASS	Acid sulphate soils				
CEMP	Construction environmental management plan				
Compliance audit	Verification of how implementation is proceeding with respect to a construction environmental management plan (CEMP) (which incorporates the relevant approval conditions).				
CoA	Conditions of approval				
DP&E	Department of Planning and Environment				
EA	Environmental Assessment				
Ecological sustainable development	Using, conserving and enhancing the community's resources so that the ecological processes on which life depends are maintained and the total quality of life now and in the future, can be increased (Council of Australian Governments, 1992).				
EPA	NSW Environment Protection Authority				
ERG	Environmental Review Group – comprising representatives of RMS, Environmental Representative, Project delivery team, regulatory authorities (EPA, DPI – Fisheries Conservation and Aquaculture, NOW) and councils (Coffs Harbour City Council, Clarence Valley Shire Council). The ERG will be maintained for the duration of the Project and will meet regularly and undertake environmental inspections. The role the ERG is to provide proactive advice on environmental management issues and review the environmental performance of the Project.				
EMM	Environmental Management Measures				
EMS	Environmental management system				
Environmental aspect	Defined by AS/NZS ISO 14001:2004 as an element of an organisation's activities, products or services that can interact with the environment.				
Environmental impact	Defined by AS/NZS ISO 14001:2004 as any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organisation's environmental aspects.				
Environmental incident	An unexpected event that has, or has the potential to, cause harm to the environment and requires some action to minimise the impact or restore the environment.				
Environmental objective	Defined by AS/NZS ISO 14001:2004 as an overall environmental goal, consistent with the environmental policy, that an organisation sets itself to achieve.				
Environmental policy	Statement by an organisation of its intention and principles for environmental performance.				
Environmental target	Defined by AS/NZS ISO 14001:2004 as a detailed performance requirement, applicable to the organisation or parts thereof, that arises from the environmental objectives and that needs to be set and met in order to achieve those objectives.				
Environmental	A suitably qualified and experienced person independent of project				
Representative	design and construction personnel employed for the duration of construction. The principal point of advice in relation to all questions and complaints concerning environmental performance.				
Representative EP&A Act	construction. The principal point of advice in relation to all questions and				

Minister, the	Minister for Planning						
Non-compliance	Failure to comply with the requirements of the Project approval or any applicable license, permit or legal requirements.						
Non-conformance	Failure to conform to the requirements of Project system documentation including this CEMP or supporting documentation.						
NOW	NSW Office of Water						
OEH	Office of Environment and Heritage						
Project, the	The Woolgoolga to Ballina Project						
RMS	Roads and Maritime Services						
Secretary	Secretary of the NSW Department of Planning and Environment (or delegate)						
Stage 1 of the Woolgoolga to Ballina Upgrade	Section 1 – Woolgoolga to Halfway Creek Section 2 – Halfway Creek to Glenugie						
	Wave 1- Soft soils works at Harwood						
	Wave 2- Soft soils works at Whytes Road to Pimlico						
	Wave 3- Soft soils works between Tyndale and Iluka Road and at Tuckombil Canal, Woodburn						

1. Introduction

1.1 Project description

NSW Roads and Maritime Services is upgrading the Pacific Highway between Woolgoolga and Ballina on the NSW North Coast. This is known as the Woolgoolga to Ballina Pacific Highway upgrade project. An overview of the project is shown in Figure 1-1.

Figure 1-1 Woolgoolga to Ballina Pacific Highway Upgrade

The project would upgrade around 155 kilometres of highway and represents the last priority (known as 'Priority 3' in the upgrade program) in achieving a four-lane divided road between Hexham and the NSW/Queensland Border. The project therefore forms a major part of the overall upgrade program and when constructed, would complete the four-lane divided road program. It would be jointly funded by the NSW and Australian governments.

The Woolgoolga to Ballina project is Australia's largest regional infrastructure project and will duplicate about 155 kilometres to four-lane divided road. The project starts about six kilometres north of Woolgoolga (north of Coffs Harbour) and ends about six kilometres south of Ballina.

When complete, the project will:

- Reduce overall length from 180 kilometres to about 167 kilometres, saving about 13 kilometres in travel distance
- Allow for a higher posted speed limit of up to 110 km/h
- Reduce travel time from 130 minutes to about 105 minutes, saving 25 minutes
- Reduce crash rates by an expected 27 per cent due to divided carriageways
- Improve travel reliability through better flood immunity, fewer incidents and more readily available alternative routes.

Key features of the upgrade include:

- Duplication of 155 kilometres of the Pacific Highway to a motorway standard (Class M) or arterial road (Class A), with two lanes in each direction and room to add a third lane if required in the future
- Split-level (grade-separated) interchanges at Range Road, Glenugie, Tyndale, Maclean, Yamba / Harwood, Woombah (Iluka Road), Woodburn, Broadwater and Wardell
- Bypasses of South Grafton, Ulmarra, Woodburn, Broadwater and Wardell
- About 40 bridges over rivers, creeks and floodplains, including major bridges crossing the Clarence and Richmond rivers
- Fifty-five underpasses and bridges over and under the highway to maintain access to local roads that crossing the highway
- Access roads to maintain connections to existing local roads and properties
- Structures designed to encourage animals over and under the upgraded highway where it crosses key animal habitat or wildlife corridors
- Rest areas located at about 50 kilometre intervals at Arrawarra, Pine Brush (Tyndale), north of Mororo Road and north of the Richmond River
- A heavy vehicle checking station near Halfway Creek and north of the Richmond River.

The Woolgoolga to Ballina upgrade does not include the completed Devils Pulpit and Glenugie upgrade projects.

Sections of the project are located adjacent to previously approved highway upgrades. As a result, the following approvals will also apply to the relevant sections of the project:

- Sapphire to Woolgoolga Pacific Highway upgrade NSW Approval (06_0293)
 13 January 2009
- Glenugie Pacific Highway upgrade NSW Approval (09/0073) 17 December 2009, Commonwealth Approval (2009/5002) 13 January 2010
- Devils Pulpit Pacific Highway upgrade NSW Approval (09_0179), 1 February 2011, Commonwealth Approval (2010/8586) 20 January 2012
- Ballina Bypass Pacific Highway upgrade NSW Approval 22 May, 2003.

1.2 Staging

A Staging Report has been prepared and approved in accordance with the requirements of the NSW Condition of Approval A7 which states:

The Applicant may elect to construct and/or operate the SSI in stages. Where staging is proposed, the Applicant shall submit a Staging Report to the Secretary prior to the commencement of each proposed stage. The Staging Report shall provide details of:

- (a) how the SSI would be staged, including general details of work activities associated with each stage and the general timing of when each stage would commence; and
- (b) details of the relevant conditions of approval, which would apply to each stage and how these shall be complied with across and between the stages of the SSI.

Where staging of the SSI is proposed, these conditions of approval are only required to be complied with at the relevant time and to the extent that they are relevant to the specific stage(s).

The project is also approved under the Commonwealth Environment Protection and Biodiversity Act 1999 (012/6394 approval dated 14/08/14).

The Staging Report as required by NSW approval condition A7 must be submitted to the Minister prior to the commencement of each of the proposed stage(s). In accordance with NSW approval condition A7 the Staging Report must outline how the proposal will be staged. The Staging Report must also outline the threatened species and communities, and migratory species impact in each stage.

The Staging Report describes the activities associated with the project stages and how compliance will be addressed across and between these.

Roads and Maritime proposes to construct the project in a number of stages. Given the nature of the project and range of procurement and delivery options involved, Roads and Maritime will update the staging report progressively as further details are confirmed. Stage 1 of the Woolgoolga to Ballina upgrade includes three construction activities. The general location of these stages is shown in Figure 1-2.

Stage 1:

- 1). Section 1 Woolgoolga to Halfway Creek
- 2). Section 2 Halfway Creek to Glenugie
- 3). Soft Soil preload construction undertaken in three waves of construction packaging to suit
 - a). Wave 1- Soft soils works at Harwood
 - b). Wave 2- Soft soils works at Whytes Road to Pimlico
 - c). Wave 3- Soft soils works between Tyndale and Iluka Road and at Tuckombil Canal, Woodburn

This Compliance Tracking Report is for the fourth reporting period, November 2016 to May 2017, for the Woolgoolga to Halfway Creek - Section 1 of the W2B Project as highlighted in Figure 1-2.

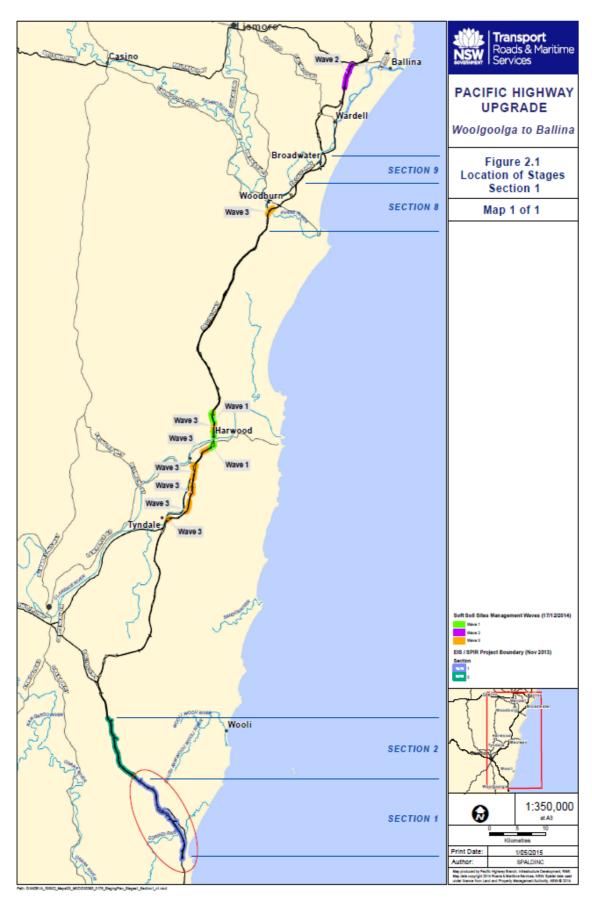

Figure 1-2: Location of all Stage 1 activities, specifically highlighting <u>Section 1 Woolgoolga</u> to <u>Halfway Creek</u>.

1.2.1 Woolgoolga to Halfway Creek

The report details the environmental performance of the Woolgoolga to Halfway Creek Project from November 2016 to May 2017, which is approximately 14.7 kilometres, comprising of a four-lane divided carriageway. The project comprises of –

- three bridge crossings of waterways or floodplains
- four bridges and underpasses to maintain access along local roads crossed by the project
- service roads and access roads to maintain connections to existing local roads and properties
- multiple fauna connectivity structures including rope bridges, glider poles, drop down structures & fish passages
- rest area located at the Arrawarra Interchange

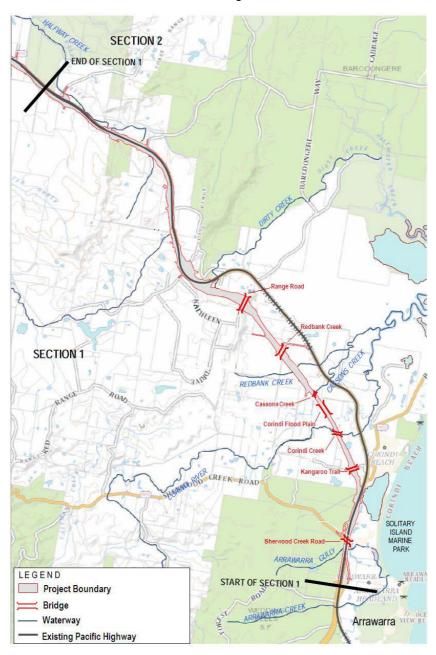

Figure 1-3 illustrates the features W2HC

1.3 Purpose

The key objective of the Compliance Tracking Program is to track compliance with the requirements of the Minister's Conditions of Approval during the design and each stage of construction of the Project. This report addresses the third six months of construction of the W2HC project from 19 November 2016 to 19 May 2017.

1.4 Environmental management system overview

The Construction Environmental Management Plan (CEMP) is the primary system to manage and control the environmental aspects of the Project during construction. It also provides the overall framework for the system and procedures to ensure environmental impacts are minimised and legislative and other requirements are fulfilled. The strategies defined in the CEMP have been developed with consideration of the Project approval requirements, safeguards and mitigation measures presented in the environmental assessment and approval documents. The CEMP establishes the system for implementation, monitoring and continuous improvement to minimise impacts from the Project on the environment.

This Compliance Tracking Program is separate to the CEMP, but is part of a suite of environmental management documents prepared for the Project.

1.5 Relevant documentation

Documentation relevant to the Compliance Tracking Program includes:

- RMS, Woolgoolga to Ballina. Upgrading the Pacific Highway. Environmental Assessment (December 2012)
- RMS, Woolgoolga to Ballina. Upgrading the Pacific Highway. Submissions and Preferred Infrastructure Report (November 2013)
- New South Wales *Environmental Planning and Assessment Act 197*9 (SSI-4963), approval dated 24 June 2014
- Commonwealth Environment Protection and Biodiversity Act 1999 (012/6394), approval dated 14 August 2014

1.6 Scope of activities undertaken during the reporting period

Throughout the six-month reporting period, a range of works have occurred across the project. A summary of these activities are listed below.

Structures

- Sherwood Creek Road has been completed.
- Kangaroo Trail Road has been completed.
- Corindi Creek bridges completed except F-Type Barriers and bridge deck asphalt
- Corindi Floodplain bridges completed except F-Type barriers and bridge deck asphalt
- Cassons Creek bridges completed except F-Type barriers and bridge deck asphalt
- Corindi Access Rd bridges completed except F-Type barriers and bridge deck asphalt
- Range Road bridge completed except Bridge Deck Asphalt and Guardrail to approaches
- All bridge works expected to be completed in August 2017

Concrete

- All paving complete between Ch1800 and Ch6600 and finishing works commenced
- LMC complete between CH0 CH1800 SB and on completion of SO Kerb Asphalt works can commence.

- Mainline paving works will continue between Cut 8 and Range Road Interchange with paving expected to be completed by early August 2017
- The total lean mix concrete placed to end of May 2017 is approximately 37000 m³ (70% complete)
- The total plain concrete paving placed to end of May 2017 date is approximately 47000 m³. (65% Complete)
- All paving expected to be completed by October 2017.

Drainage

- Cross drainage 94% complete.
- Works commenced on Stage 2 of Eight Reinforced Concrete Box Culverts (RCBC's) in Northern section of project.
- Pavement drainage approximately 92% complete with remaining works at Range Road northbound offramp, Arrawarra Rest Area and Southbound Ch10200 – Ch14600 the only works outstanding.
- All drainage works anticipated to be complete by early September 2017.

Blasting

• No further production blasting has occurred since November 2016.

Sedimentation basins & erosion and sediment controls

- 33 licenced sedimentation basins have been commissioned in total across the project in consultation with the project soil conservationist and EPA
- 13 licensed sedimentation basins are currently on the project Environmental Protection Licence.
- OHLY provide the projects Sedimentation Basin and Irrigation Register to EPA monthly or when requested, including when a basin is been decommissioned or commissioned.
- Progressive erosion and sediment control plans continue to be developed throughout each construction stage.

Environment Training

- Incident learnings undertaken as required.
- Site awareness environmental training.
- Weekly toolbox and daily pre-start environmental updates
- Bi-weekly environmental induction covering current environmental risks and their mitigation including legislation

Additional construction works undertaken during the reporting period

- All foundation treatments complete except western side of Range Road Interchange and SB Ch10200 – Ch14600
- 89% of SMZ sealed
- Three Rope Bridge Fauna Crossings installed
- Fit out of permanent basins substantially complete
- Installation of Fauna Crossings substantially complete with remaining works awaiting completing of RCBC's in the north.
- Paving works completed from Ch1800 Ch6200 and finishing works well advanced.
- Bulk earthworks are 98% completed across the project.

- 90% of the electrical / Telstra relocation works have been completed.
- Batch plant at Taylors Run has produced a total of 84 000 m³ of concrete to date.
- Switch traffic to northbound carriageway Ch10200 Ch14600 completed 29 April 2017
- Rock bolting works completed in Cut 8.

1.7 Performance of environmental controls that have been implemented

Erosion and sediment control

The progressive erosion and sediment control plans are continually being implemented by OHLY in consultation with the project Soil Conservationist & RMS Soil Conservationist. The project Soil Conservationist continues to assist OHLY by providing advice on erosion and sedimentation controls, particularly in sensitive areas, including decommissioning licensed sedimentation basins. Engineers, environmental personnel and foreman continue to work collaboratively in developing erosion and sediment control plans to ensure effective onsite implementation.

A range of natural erosion controls continue to be adopted, specifically the use of mulch and earth bunds, etc. Where possible geofabric and sediment fence are avoided or installed as a final solution in an aim to prevent waste.

Protection of waterways

All temporary creek crossings including the floodplain temporary access have now been removed and rehabilitated. Protection of clean water continues to occur across the project including completion of eight box culverts built online, which was completed with no environmental incidents. Weekly inspections continue to occur with particular attention to protecting clean water.

Air Quality

To manage dust onsite, multiple water carts have been working continuously throughout the project to minimise generation of dust from construction activities. Cover of exposed surfaces, using cover crop seed etc is continuing, which also assist with dust control. Dust from haul roads is minimised through enforcement of speed limits onsite and use of water carts.

There are no limited exposed areas as a result of the successful paving programme, which has also reduced the areas of potential dust across the project.

Two crushing operations have been operating at any one time during the reporting period, often close to the existing Highway as a result of limited space. These operations are controlling the dust using multiple sprayers, using larger rain tanks and wetting down stockpiles.

Weekly toolbox talks continue to emphasise the importance of speed limits onsite for safety and environmental reasons. Stabilised haul roads are also assisting with dust control together with street sweepers at these locations. Other measures include stabilised access points throughout the project and use of soil binders to suppress dust.

Water generated from sedimentation basins and sediment traps has preferentially been reused as another water source of dust suppression across the project.

Noise & Vibration

The project obtained a six monthly out of hours in December 2016, which required a 48-hour notification prior to any out of hour's works for key activities including bridge construction, local roads, drainage works, traffic switches and road maintenance. This out of hours approval extends to project completion. Separate out of hours approvals were obtained for operation of the Taylors Run batch plant and paving operations, which required attended out of hours noise monitoring.

Heritage

There has been one (1) desktop heritage assessments undertaken during the reporting period, as summarised below:

• 5 May 2017 - Desktop assessment, Northern Access Track

The project continues to maintain a positive working relationship with the Aboriginal representatives.

Waste

The waste hierarchy is continually being adopted onsite, specifically Reduce, Reuse, Recycle. Where possible, waste reuse is prioritised onsite, particularly for surplus unsuitable material, concrete, old asphalt pavements, steel and timber as this also has cost benefits.

Waste oil and oily materials are transported to the project workshop and removed regularly by a local waste recycling operator. Purchasing materials which have a recycled content occurs where possible. Some materials (excess spoil and reclaimed asphalt, for example) have been sought by external parties with development consents and addressed under waste procedures and Section 143 permits, which also assist the project in reducing the volume of waste while supporting beneficial reuse opportunities.

Mulch is continually being used onsite for erosion and sediment control is working well.

Concrete waste generated by the project is also reused for embankment construction after being crushed. There have been reasonable volumes of concrete waste recycled on the project for reuse. Steel recycling also occurs on the project. A licenced waste metal contractor collects the material regularly. Many concrete pipes and box culverts have been given to farmers and other external parties for reuse rather than crushing them.

The project also offers waste timber pallets & other materials to the Woolgoolga Community Men's Shed, a local organisation supporting men's health and wellbeing.

Fauna

Ecological monitoring continued during the reporting period. Results are summarised in Section 3.6.

During the reporting period measures have been both continued or implemented in order to mitigate impacts on fauna. These include the following:

- Temporary frog fence has remained in place and maintained in order to minimise the risk of threatened frogs entering the work area. No threatened frog mortalities have been identified during construction. Permanent frog fence has been progressively installed on the project.
- The project has recorded an increase in numbers from the baseline for the Giant Barred Frog at Corindi Creek upstream and downstream, which illustrates a healthy ecosystem.
- Operational Fauna exclusion fencing is progressively being installed throughout the project.
- Any clearing which has taken place has been done in accordance with the Threatened Flora and Fauna Management Plan.
- Green-thighed Frog ponds were constructed at Redbank Creek and Falconers Lane as per the Threatened Frog Management Plan.
- Fauna furniture and refuge poles have been installed in several underpasses.
- Rope bridge and glider pole locations have been finalised.

2. Program requirements

The Compliance Tracking Program has been prepared as a requirement of CoA D27. The requirements, as stipulated by this CoA, are detailed in 2.1.

Table 2-1 CoA requirements for the Compliance Tracking Program

CoA No.	Requirement	Reference
D27	The Applicant shall prepare and implement a Compliance Tracking Program , to track compliance with the requirements of this approval, prior to the commencement of construction and operate from the date of its approval to a minimum of one year following commencement of operation, or as otherwise agreed by the Secretary. The Program shall be prepared for the approval of the Secretary, and include, but not necessarily be limited to:	This document
(a)	provisions for the notification of the Secretary prior to the commencement of construction and prior to the commencement of operation of the SSI (including prior to each stage, where works are being staged);	Section 2.1
(b)	provisions for periodic review of the compliance status of the SSI against the requirements of this approval;	Section 2.2
(c)	provisions for periodic reporting of compliance status to the Secretary, including a Pre-Construction Compliance Report, prior to the commencement of construction, and a Pre-Operation Compliance Report prior to the commencement of operation. These reports may be staged to suit the staged construction/operation of the SSI;	Section 2.3
(d)	a program for independent environmental auditing in accordance with ISO 19011:2003 - Guidelines for Quality and/or Environmental Management Systems Auditing;	Section 2.4
(e)	mechanisms for recording environmental incidents during construction and actions taken in response to those incidents;	Section 2.5
(f)	provisions for reporting environmental incidents to the Secretary and relevant public authorities during construction;	Section 2.6
(g)	procedures for rectifying any non-compliance identified during environmental auditing, review of compliance or incident management; and	Section 2.7
(h)	provisions for ensuring all employees, contractors and sub-contractors are aware of, and comply with, the conditions of this approval relevant to their respective activities.	Section 2.8

2.1 Secretary notification

CoA D27 (a) requirement:

"provisions for the notification of the Secretary prior to the commencement of construction and prior to the commencement of operation of the SSI (including prior to each stage, where works are being staged)"

Construction will commence on each stage of the Project according to the Staging Report, following approval by the Secretary of the relevant CEMP, associated environmental plans and other relevant documentation required by the approval.

RMS will advise the Secretary in writing prior to the commencement of construction and operation.

The CEMP for Section 1 was approved by the Department of Planning and Environment on 19 May 2015, with the Environment Protection Licence 20590 subsequently issued on 19 May 2015. Construction subsequently commenced on the 19 May 2015.

2.2 Period compliance review

CoA D27 (b) requirement:

"provisions for periodic review of the compliance status of the SSI against the requirements of this approval"

RMS will review the status of compliance and submit periodic compliance reports to the Secretary as follows:

- Prior to the commencement of construction.
- Six months after the commencement of construction and then at six monthly intervals thereafter.
- Prior to the commencement of operation.

This report captures the fourth six months of construction for the period 19 November to 19 May 2017. The compliance tracking tables (contained to Appendix A) form an integral component of this periodic review.

These tables establish a format for recording compliance and include:

- Description of the environmental obligation.
- The stage of the project to which it relates.
- Status.
- Responsibility

2.3 Period compliance reporting

CoA D27 (c) requirement:

"provisions for periodic reporting of compliance status to the Secretary, including a Pre-Construction Compliance Report, prior to the commencement of construction, and a Pre-Operation Compliance Report prior to the commencement of operation. These reports may be staged to suit the staged construction/operation of the SSI"

Revision 2 (dated 7 July 2015) of this Compliance Tracking Report documented the preconstruction compliance status. This report (Revision 7) is the fourth of the six monthly Compliance Tracking Reports, which captures the construction compliance status during the period to 19 November 2016 to 19 May 2017. Sections 1.6 to 1.7 summarises the environmental and construction information relevant during this six month reporting period for this report.

At intervals prescribed in Section 2.2 the status of compliance will be reviewed and reported to the Secretary in the form of a Compliance Tracking Report. The Compliance Tracking Report includes:

- Scope of the activities undertaken during the reporting period (Section 1.6)
- Performance of environmental controls that have been implemented (Section 1.7)
- Compliance with CoA, revised EMM as recorded in the compliance tracking tables (Appendix A)
- Non-compliances during the reporting period (Section 2.7)
- Detail of all incidents recorded and action taken during the reporting period (Section 2.5)
- Outcomes of monitoring undertaken over the reporting period and review of compliance against relevant criteria (Section 3).
- Outcomes of audits and ERG inspections undertaken during the reporting period (Section 2.4)
- Detail of substantiated environmental complaints received, responses taken and current status (Section 4).

2.4 Independent environmental auditing

CoA D27 (d) requirement:

"a program for independent environmental auditing in accordance with ISO 19011:2003 - Guidelines for Quality and/or Environmental Management Systems Auditing"

RMS will ensure that independent audits are undertaken in accordance with ISO 19011:2003 - Guidelines for Quality and/or Environmental Management Systems Auditing at six monthly intervals throughout construction. The audits will assess compliance against the CoA and SoCs.

On 15 and 16 February 2017, OHL Madrid conducted an audit on environmental, quality and safety, which resulted in two non-conformances (NCR). One NCR related to cans, plastic were contained in a steel wast bin. Corrective action was to toolbox work crews and place additional signage on the bins for clarity. The second NCR related to environmental un-fulfilments being registered as incidents and not non-conformities. Corrective action was no change, as the current system still captures the non-conformities.

On 27 and 28 March 2017, RMS conducted an independent audit on plant, safety, industrial relations, and environment. Five (5) observations of concern were noted for environment. Details of the five OOC's and their close outs include - (i) related to storage of fuels and chemicals not been properly bunded, which are now bunded with up to date and available SDS (ii) weekly site inspections on a weekly inspection checklist, alternate system has been adopted but approval not sought from RMS, where approval has now been sought (iii) No procedure for dewatering waterways, where EWMS 26 now includes dewatering waterways (iv) EWMS for sediment basin does not include the requirement to have a mark showing 60% of the sediment storage zone, where the EWMS now includes the 60% storage marker requirement (v) ERSED plans are not been provided consistently to RMS, and approval has not been sought to reduce the frequency of the soil conservationists inspections from fortnightly to monthly, where OHLY obtained RMS approval for the change in frequency.

All actions have been satisfactorily closed out.

Daily & weekly site inspections are undertaken on the project by the Foreman, ESR, Engineers and the Superintendent. Weekly formal inspections are undertaken and recorded on the system as per requirements in the project CEMP.

Regular Soil Conservationist inspections are also undertaken on the project. Reports outlining the outcomes of the Soil Conservationist are provided to RMS. RMS also have an independent Soil Conservationist conduct inspections to review Blue Book compliance. These are joint inspections with the project team to optimise environmental outcomes for the project.

RMS and the ER conduct site inspections to review environmental performance. The ERG inspections and meetings occur regularly.

2.5 Incident reporting and response

CoA D27 (e) requirement:

"mechanisms for recording environmental incidents during construction and actions taken in response to those incidents"

RMS's Environmental Incident Classification and Reporting Procedure will be implemented for all environmental incidents for the Project. The full procedure is provided in Appendix A6 of CEMP.

http://home.rta.nsw.gov.au/dts/cserv/os/original/environment/ems-tp-07.pdf

Typically, environmental incidents will be notified verbally immediately of any incident occurring to the RMS Representative and the Environmental Representative. Incident reports will be provided to RMS Representative and the Environmental Representative within 24 hours of the incident occurring, including lessons learnt from each environmental incident and proposed measures to prevent the occurrence of a similar incident. All efforts will be undertaken immediately to avoid and reduce impacts of incidents and suitable controls put in place. Incidents will be closed out as quickly as possible, taking all required action to resolve each environmental incident.

The EPA will be notified of any environmental incidents or pollution incidents on or around the site via the EPA Environment Line (telephone 131 555) in accordance with Part 5.7 of the *Protection of the Environment Operations Act 1997* (NSW) (POEO Act). The circumstances where this will take place include:

- If the actual or potential harm to the health or safety of human beings or ecosystems is not trivial.
- If actual or potential loss or property damage (including clean-up costs) associated with an environmental incident exceeds \$10,000.

The Project will maintain all records relating to environmental incidents. Roads and Maritime Environment Branch will also provide assistance with maintaining records relating to environmental incidents.

During the six months reporting period, there were a total of five (5) environmental incidents. A summary of these environmental incidents and the corrective actions are summarised below. All the incidents recorded during the reporting period have been closed out.

- 22 November 2016: small amount of concrete slurry from a subcontractor tipper truck hauling concrete from the project batch plant to the northern end of the project came into contact with a public vehicle. No permanent damage. EPA advised the OHLY Environment Manager of the incident. The trucks are required to clean the tailgates after discharge. Small pieces of aggregate may not be removed causing the tailgates to remain slightly ajar after being loaded causing minor slurry loss. All trucks in the concrete haulage fleet to be inspected prior to the next concrete haulage run on the Pacific Highway to ensure that tailgates are fit for purpose and can be sealed with a full concrete load. Trucks that do not meet this requirement are not to haul concrete. The incident was reported as Potential Category 2.
- 28 November 2016: paving works commenced at the batch plant and at the paver outside
 of the approved working hours. Works commenced at 5am. Permitted start time 6am.
 Respite was arranged for the residents at 31 Kangaroo Trail Road for the week prior and
 a start time of 5am was permitted. Paving/batching works were arranged to commence at
 6am on 28 November 2016. An internal communication between the Paving Manager
 and the paving foreman was not received and works commenced in error at 5am. No

respite had been arranged. Daily Paving VMP to be issued with permitted working times at batch and paver. Toolbox with Paving and batch team to discuss/review permitted working hours on the project. Check on Thursday each week to review any out of hours/respite actions required for following week. The incident was reported as Potential Category 1 and a non-conformance reported to EPA.

- 15 December 2016: in accordance with EPL 05.9, following 83mm rainfall received from 30 November 2016 to 10 December 2016, the 5-day design capacity was not reinstated on TB949 licensed sedimentation basins. The three (3) outstanding basins were all discharged to their design capacity immediately after Day 5. All basin were pre-dosed with gypsum leading up to forecasted rain event. However, 949 had been recently desilted which resulted in residual gypsum layer/coating being limited in addition to this particular basin being 2 meg. As a result, the flocculation process did not occur within the five day EPL requirement, despite all efforts being made by the Project. The basin continued to be treated until it could be discharged as per licence requirements. Basin discharge occurred on day six. Additional predosing of basins to enable quicker flocculation of basins, particularly larger basins.
- 22 March 2017: The incident involved paving mainline base concrete away from Cassons Creek, when 1mm rainfall occurred, resulting in curing compound running off the surface into the subsoil drains, drainage pit and ultimately permanent basin PB479R. The incident was considered a potential category 2 as the resin did not leave the project boundary and did not cause any material harm. The decision to complete concrete paving was made on the following basis - assess and monitor BOM radar, delay start, reassess radar, consult with Superintendent and Construction Manager (Project Manager away). Tarp carrier in place to cover concrete as required from the southern end (creek). All resin was contained onsite and within the basin. Sucker truck was used to suck fluid from drainage pits and skim surface which was contained using hydrocarbon booms. Four water carts used to extract water from the sediment basin. Geofabric plastic placed over low flow pipes. The paving EWMS process was followed, where the Superintendent, Paving Manager and Construction Manager assessed the radar and forecast, which was possible change of rain 1-5mm >90%. The radar was clear and the decision was made to proceed. Control measures in place - tarps to cover what resin was placed. Preventative action includes basins to be emptied prior to applying wax/resin.
- 4 May 2017: Paved shoulder south of Kangaroo Trail Road Southbound carriageway in the morning. Rain came in and the pavement was covered. The pavement ahead that required wax curing prior to paving (debonding agent) was also covered with plastic. Water was able to get under the plastic and run off, with approximately six litres of waxing compound, down the pavement to the southern end. Action Additional sand bags were installed at the entry to reduce water runoff into the wax covered area. A suckertruck was mobilised to site immediately. Additional bunds were installed on the low side to retain any run off. A sump was installed on the road level to retain the affected material.

All incidents have been closed out.

2.6 Incident reporting to Secretary

CoA D27 (f) requirement:

"provisions for reporting environmental incidents to the Secretary and relevant public authorities during construction"

The Secretary will be notified of incidents in writing in circumstances where:

- The actual or potential harm to the health or safety of human beings or ecosystems is not trivial.
- The actual or potential loss or property damage (including clean-up costs) associated with an environmental incident exceeds \$10,000.

An initial notification to the Secretary will be made verbally within two working days. The written notification will be made within 10 working days.

Where incidents are considered to be minor, ie do not meet the criteria above, they will be reported to the Secretary in accordance with the compliance tracking program at frequencies prescribed in Section 2.2.

All environmental incidents are being recorded and reported to the EPA, ER, RMS & Fisheries through the ERG, monthly reporting or immediate notification as per the procedure.

2.7 Addressing non-compliance

CoA D27 (g) requirement:

"procedures for rectifying any non-compliance identified during environmental auditing, review of compliance or incident management"

Section 8.4 of the CEMP describes in detail the system for tracking compliance prior to and during construction.

Where a non-compliance has been identified, a corrective/preventative action (or actions) will be implemented.

Corrective/preventative actions will be entered into the OHLY quality system database and include detail of the issue, action required and timing and responsibilities. The record will be updated with date of close out and any necessary notes. The database will be reviewed regularly to ensure actions are closed out as required.

The close-out of required actions will be reviewed during forums including Environmental Representative and ERG inspections, and the Environmental Representative will be actively involved in the review and resolution of non-compliances.

A total of one (1) Environmental Protection Licence (EPL) non-compliances occurred during the reporting period, specifically -

• EPL O5.9 – 15 December 2016: in accordance with EPL 05.9, following 83mm rainfall received from 30 November 2016 to 10 December 2016, the 5-day design capacity was not reinstated on TB949 licensed sedimentation basins. The three (3) outstanding basins were all discharged to their design capacity immediately after Day 5. All basin were predosed with gypsum leading up to forecasted rain event. However, 949 had been recently desilted which resulted in residual gypsum layer/coating being limited in addition to this particular basin being 2 mega litres. As a result, the flocculation process did not occur within the five day EPL requirement, despite all efforts being made by the Project. The basin continued to be treated until it could be discharged as per licence requirements. Basin discharge occurred on day six. Additional predosing of basins to enable quicker flocculation of basins, particularly larger basins.

This non-compliance was immediately reported to EPA and discussed in detail with the ERG. The above non-compliance has been closed out.

2.8 Employee inductions

CoA D27 (h) requirement:

"provisions for ensuring all employees, contractors and sub-contractors are aware of, and comply with, the conditions of this approval relevant to their respective activities"

Section 5.1 of the CEMP describes in detail how all personnel working on the Project are aware of their environmental obligations.

During construction, the Environmental Manager (or delegate) will conduct the environmental component of the site inductions. The environmental component will include, but not limited to, an overview of:

- Relevant details of the CEMP including purpose and objectives.
- Key environmental issues.

- Conditions of environmental licences, permits and approvals.
- Specific environmental management requirements and responsibilities.
- Mitigation measures for the control of environmental issues.
- Incident response and reporting requirements.
- Information relating to the location of environmental constraints.

A record of all environment inductions will be maintained and kept on-site.

3. Environmental Monitoring

Monitoring and testing has been undertaken for surface / ground water quality, noise, dust and flora and fauna in accordance with the Construction Environmental Management Plan (CEMP) and subsequent management plans during the reporting period. Monitoring results are provided in Appendix B. Further details on monitoring during the reporting period are provided below.

3.1 Surface Water

OHLY undertake monthly surface water quality monitoring at predetermined locations in accordance with the Surface Water Quality Programme. Eight (8) waterways are monitored at upstream and downstream locations. Water quality results are presented in Appendix B. The monitoring results are uploaded onto the project environmental monitoring database and conveyed to the Environmental Review Group (ERG) on a monthly basis. Water quality parameters include – pH, turbidity, temperature, dissolved oxygen, electrical conductivity and nutrients.

The water quality meter is calibrated on-site prior to any water quality monitoring and is serviced by qualified technicians recommended by the manufacturer.

The following information provides a discussion on the results during the reporting period.

- Consistent with the pre-construction water quality data, the results illustrate variability
 throughout the reporting period. Noticeable changes occur following high rainfall events,
 specifically during March and April 2017, leading to elevated levels in Total Suspended
 Solids, dissolved oxygen and turbidity.
- pH values are general consistent with between upstream and downstream at each creek site with slightly acidic values, overall ranging from 6.04 to 8.45 across all the sites.
- The laboratory results for oil and grease displayed some variability throughout the monitoring period (US and DS) although Hydrocarbon or BTEX detection levels were not triggered.
- No elevations in nutrients or heavy metals were observed during the reporting period.
- Overall, sample results have not indicated any impact has occurred from project works on the downstream environments.

Controls are constantly monitored and reviewed as part of the rainfall and weekly inspection process, taking into account water quality results and changing work environments.

In relation to sediment basins, flocculation is being undertaken to ensure the discharge criteria for pH and turbidity is met prior to releasing a sediment basin, within or before the five (5) day EPL condition. Results are provided to EPA in the EPL monthly reports. The use of gypsum at inlets and use of fine gypsum or calcium chloride continues to assist in reducing timeframes for release of sediment basins.

3.2 Blast & Vibration

No production blasting has occurred since September 2016.

3.3 Noise Monitoring

Monthly attended noise monitoring results for November 2016 to January 2017, were all well below the predictive/objective Leq. Monthly attended noise monitoring discontinued as agreed at February 2017 ERG due to consistent results and no abnormalities. It was agreed at the February ERG, where any new high noise generating activities were to take place in areas not previously undertaken, attended noise monitoring would be required. Subsequently, no new high noise activities have occurred.

3.4 Air Quality

Monthly dust monitoring occurs at 12 locations across the project. The results of the dust monitoring are compared to the prescribed dust criteria of 4g/m²/month for the project (refer Appendix B).

In summary, the following was noted during the reporting period –

- DDG8 was above the 4g/m²/month in February 2017. DDG8 (Costa Berries car park) resulted in 8.9g/m²/month during the month of February 2017. The dust gauge locality was shown to ERG representatives during the February ERG to discuss the proximity to the project boundary and closest dust generating activity which was crushing operations. The crushing operations were relocated to the Hawthorn pad and the ash content of the result was only 2.1g/m²/month. It has been noted that the Costa Berries car park is unsealed.
- With the exception of the above exceedance, all dust gauges for the six months period were within the allowable limit of 4 g/m2/month.

EPA were notified immediately when an exceedance occurred and results discussed in detail at the monthly ERG meetings. Water carts are continuously used to reduce dust emissions across the project with good results.

3.5 Groundwater

Groundwater monitoring was undertaken in accordance with the approved Water Quality Monitoring Program during the reporting period. In accordance with the approved plan, the results of the Project Water Quality Monitoring Program (Sections 1-2) will be provided in the second Annual Monitoring Report.

3.6 Flora and Fauna

Biodiversity monitoring for threatened species, populations and communities identified within the approved Threatened Species Management Plans during the construction phase of the project is ongoing. Annual monitoring reports for each Plan will continue to be submitted to EPA and DP&E in accordance with the reporting schedule.

Nest Box Monitoring

In accordance with the Nest Box Management Plan, 100% of the nominated nest boxes have been installed on the project, and nest box monitoring has continued to be undertaken as per the approved nest box monitoring plan.

Threatened Frog Monitoring

Green-thighed Frog

Monitoring for the Green Thighed Frog was undertaken in accordance with the Threatened Frog Management Plan over the compliance reporting period. The annual monitoring report for Green Thighed Frog will be submitted to EPA, and DP& E in accordance with reporting schedule.

Giant-barred Frog

Monitoring for the Giant Barred Frog was undertaken in accordance with the Threatened Frog Management Plan over the compliance reporting period. The annual monitoring report for Green Thighed Frog will be submitted to EPA, and DP& E in accordance with reporting schedule.

Threatened Glider Monitoring

Threatened glider monitoring occurred throughout the reporting period in accordance with the Threatened Glider Management Plan. The annual monitoring report for Gliders will be submitted to EPA, and DP& E in accordance with reporting schedule.

Microbat Monitoring

Microbat monitoring was undertaken in accordance with the Microbat Management Plan. The annual monitoring report for Microbats will be submitted to EPA, and DP& E in accordance with reporting schedule.

In-situ and Translocated Threatened Flora Monitoring

Monitoring of in situ & translocated threatened flora occurred during the reporting period in accordance with the threatened flora management plan. The annual monitoring reports for In-situ and translocated threatened flora will be submitted to EPA, and DP& E in accordance with reporting schedule.

Environmental Complaints

During the six months reporting period, there were a total of nineteen (19) recorded complaints relating to the project. These complaints comprised of eight (8) relating to dust (two of which also included a noise complaint), two (2) relating to water and six (6) relating to noise, two (2) related to vehicle damage due to slurry deposits from concrete hauling and one (1) other which was in regard to a residents sensitivity to outside odours non related to the project.

A summary of the complaints and the responses are provided below. All complaints are recorded into Consultation Manager and are tracked by assigning any actions to the appropriate person until they are closed out to the satisfaction of the resident. All the complaints received during the reporting period have been closed out.

- 21 November 2016: A resident travelling through the job received some slurry on their vehicle from a truck carrying concrete to the paver. The truck was stopped by a highway patrol car and issued with a defect notice. The resident was advised that the truck company would pay for a detail of the vehicle. The resident thanked for the response.
- 22 November 2016: EPA rang the Environment Manager regarding a member of the
 public's vehicle receiving slurry from a truck carrying concrete to the paver. The
 Environment Manager advised that that all trucks would be inspected to ensure that
 tailgates were fit for purpose and could be sealed with a full concrete load. Trucks that did
 not meet this requirement would not be used. EPA thanked for the response.
- 28 November 2016: A resident of Kangaroo Trail Road, Corindi Beach, rang regarding noise from trucks going to and from the batch plant which had started early. The resident said they thought they would be notified when that was going to occur. Community Manager apologised and advised that there had been a lack of communication within the project team regarding the starting times for the batch plant. She advised that the batch plant would be starting early the next day through to Thursday morning and that the project wanted to again offer relocation. Resident advised that the response was acceptable and thanked for the offer of relocation.
- 7 December 2016: A resident of Dirty Creek Road, Dirty Creek, sent a text message regarding turbidity in the creek. The Community Manager called the resident to advise that the project had had a reportable rain event with 79mm of rain being recorded in the vicinity and basins overtopping. The Community Manager advised that the Environment Manager had advised The Environment Protection Authority. She offered to have the Environment Manager meet with the resident regarding his concerns. The resident declined but thanked for the response.
- 19 December 2016: A resident of McPhillips Road, Halfway Creek, complained about the noise mitigation treatment process being managed by RMS during a meeting with the Community Manager about a separate matter. The Community Manager advised RMS

who discussed the complaint with their noise mitigation treatment contractor. The contractor contacted the resident to explain the process.

- 9 January 2017: A resident of Kangaroo Trail Road, Corindi Beach, rang the freecall line regarding a truck that he felt was travelling too fast and creating dust. The resident said the truck had travelled south up a ramp near his property, had not observed the stop sign at the top of the ramp and had created dust by travelling too fast. The Community Manager apologised and advised the resident that she would have someone speak to the driver about keeping their speed down which would help mitigate dust. She also provided the results of the dust deposition gauge for November 2016 which were 1.3g/m2/month. The resident thanked for the response.
- 10 January 2017: A resident of Kangaroo Trail Road, Corindi Beach, sent an email following the results of the dust deposition gauge on their property being provided to them. The email complained about a car in their garage being covered in dust as well as dust being created by vehicles travelling up a ramp near the property and not observing the stop sign or turning right. The Community Manager advised that construction vehicles needed to observe the stop sign and also were not allowed to turn right. A sign was in place advising that right turns were not allowed. She advised that both issues would be toolboxed. The resident thanked for the response.
- 8 February 2017: A resident of Kangaroo Trail Road, Corindi Beach, made complaints
 regarding dust and also noise from cement trucks using their airbrakes. The road was
 watered to ensure mitigation of dust when required and the trucking companies sent out
 alerts to their drivers regarding keeping noise to a minimum. The resident was advised of
 the actions and thanked for the responses.
- 8 February 2017: Costa manager sent an email regarding dust on a worker's car in the bottom car park of the office area. The manager sent through some photos of dust on a worker's car taken on 6 February 2017. She asked if the Community Manager could check to ensure that appropriate dust suppression was in place. The Community Manager advised she had spoken to the superintendent and showed him the photos. The project would ensure the tank that sprayed water onto the stockpile always had plenty of water and that there were ample water carts dedicated to the operation. The manager thanked for the response.
- 10 March 2017: During a recent RMS meeting with a resident regarding at-house noise treatment, the resident complained about a heavy vehicle using compression brakes in the vicinity of their property. The RMS representative responded to the resident saying that they would follow up on this complaint of which the resident thanked them. The project Construction Manager was advised of this issue who in turn followed up with the trucking company and driver.
- 27 March 2017: Local resident advised of their dissatisfaction with the process currently being undertaken with regard to the noise treatments. Resident raised concerns over the lack of communication and information they are experiencing at this present time. The project representative advised the resident that this information would be relayed to the relevant RMS representative for further action. Resident thanked us for our time.
- 28 March 2017: Email received from a resident of Kangaroo Trail Road, Corindi Beach regarding a wicked odour to the rear of their property. After consulting with several of OHLY JV representatives, it was established that no work was being undertaken by the project within the immediate vicinity of their property that would cause the offensive odour. This message was conveyed to the resident and it was also pointed out that it may be due

to works on the Corindi Sewerage Treatment Plant located a short distance from their property. The resident thanked us for investigating the issue.

- 29 March 2017: RMS, OHLY JV and WMA representatives met with local residents of Post Office Lane to discuss re-occurring flooding issues. Owner expressed her dissatisfaction and concerns with the current situation regarding the water levels of the property's spring fed billabong and the flooding of an access track within the property. Owners have requested for further investigations into the water issues they are experiencing. Residents were satisfied with WMA doing further investigations.
- 11 April 2017: Resident of Kangaroo Trail Road, Corindi Beach complained regarding dust issue due to increase of vehicle movement along the local road. Resident was advised that there has been no increase in the productivity from the batch plant therefore no increase in vehicle movement in and around KTR. Community also informed the resident that the project is undertaking regular watering as required and that the dust disposition recording in their location is well below the exceedance level. The resident thanked for the response.
- 19 April 2017: Resident of Kangaroo Trail Road, Corindi Beach emailed complaint through regarding dust issues and heavy vehicle movement on the local road past their property. Resident was advised by Community Relations that OHLY JV has a watercart running along new alignment from the location of the batch plant through to the construction ramp at KTR and along KTR, watering down to assist with the elimination of the dust. Resident was informed that this practice will continue as per the current operations of the batch plant to ensure that dust is kept as minimal as possible. Community also offered the resident that the dust gauge reading results would be available in the coming days and they will be forwarded once received. The complaint regarding vehicle noise was addressed with the Safety Manager and the Superintendent who in turn spoke to the relevant hauling company and all site employees at the weekly toolbox. Resident did offer a thank you note to one particular site employee for slowing down to allow kangaroos right off way across KTR.
- 24 April 2017: Resident of KTR complained about highway traffic noise carrying from the
 Pacific Highway to their place of residence on the local road. The resident asked whether
 OHLY JV & the RMS had changed the traffic speed from 80km to 100km as traffic noise
 on the Pacific Hwy seemed extremely loud this morning. Community Relations assured
 resident that the speed limit on the Pacific Hwy between Arrawarra interchange and Coral
 Street, Corindi had not been increased and remains at 80km. Resident thank Community
 Relations for her time.
- 11 May 2017: Resident of Arrawarra telephoned through with a complaint relating to highway traffic noise within the Arrawarra area. Resident stated that he is suffering from 2 years of sleep deprivation due to the highway noise, particularly compression braking of heavy vehicle in the early hours of the morning. Feels that Arrawarra rest area has created a noise corridor with the resident questioning why Arrawarra was not considered a location for noise monitoring on this upgrade. Community Relations explained the noise investigation process is carried out by RMS and that noise mitigation was governed by EPA legislation. Resident was sent a link to the RMS website for further information on noise monitoring and was advised that RMS would be in contact to discuss further. Resident thanked the Community Relations for her time.
- 22 May 2017: Resident of KTR emailed with a complaint regarding dust along the local road from the heavy vehicle traffic and also project vehicles speeding along KTR.
 Community Relations replied to the email advising that the water carts are operational and

will be making their inspections throughout the day. Also advised that a reminder has been sent out to all drivers to abide by the road speeds when travelling in the local area.

Community consultation activities from November 2016 to May 2017

A number of consultation activities were undertaken with local businesses and residents for controlled blasting activities, paving operations including out of hours works, project construction updates and upcoming traffic switches.

Feedback about the project from the local community has generally been very positive.

Appendix A - Compliance tables							

COMPLIANCE TRACKING - MCoA Part A

				GOVERNMENT Services
Ministers Condition Of	Requirement	Timing	Responsibility	Comment
approval				
A1	In addition to meeting the specific performance criteria established under this approval, the Applicant shall implement all feasible and reasonable measures to prevent and/or minimise any harm to the environment that may result from the construction or operation of the SSI.	Pre-construction Construction Operation	Pacific Complete	This is addressed within the contract documents eg. CEMP/sub plans, design drawings specifications etc.
A2	The Applicant shall carry out the SSI generally in accordance with the: (a) State significant infrastructure application SSI-4963; (b) Pacific Highway Upgrade Woolgoolga to Ballina Environmental Impact Statement Volumes 1A, 1B, 2, 3, 4A, 4B, 5, 6A, 6B, 6C, 7A, 7B and 8, prepared by Roads and Maritime Services, dated December 2012; (c) Pacific Highway Upgrade Woolgoolga to Ballina Submissions/Preferred Infrastructure Report Main Volume and Appendices, prepared by Roads and Maritime Services, dated November 2013; (d) Ancillary facility sites listed in Woolgoolga to Ballina Pacific Highway Upgrade - Ancillary descriptions and impact assessment, prepared by Roads and Maritime Services, dated 13 December 2013; (e) Connectivity structures listed in Woolgoolga to Ballina Alliance Update 20 Feb 2014 Structures Inventory (except Sections 1 and 2) and Woolgoolga to Glenugie Fauna Connectivity Tracking Register 11/02/2014, prepared by Roads and Maritime Services, and email correspondence from Roads and Maritime Services and tental to repeat and letter dated 14 March 2013; (f) Pacific Highway Upgrade Woolgoolga to Ballina: Utilities impact native vegetation (000395_0102_Utilities Clearing Vegetation_v9), prepared by Roads and Maritime Services, dated 21 May 2014, (g) Modification request and letter dated 17 November 2014 to modify the definition of construction under subclause f in relation to section 4 utility adjustments and replacement of all references to OEH with EPA; (h)Modification request and letter dated 24 September 2015 to modify the approval to capture additional works outside the project boundary that may impact on heritage items to require archaeological investigations; and (i) conditions of this approval.	Pre-construction Detailed Design Construction Operation	Pacific Complete	Roads and Maritime has identified relevant commitments, obligations, undertakings and requirements (COURs) in the environmental assessment and approval documentation for the Stage 1 Projects. A COURs database has been developed; the database will assist Roads and Maritime to manage compliance and contractual risk. Further confirmation has been provided through the compliance reporting developed in response to condition D27. Ongoing operational requirements as they relate to Stage 1, subject to this condition, will be incorporated into Roads and Maritime's existing operational management systems. It is anticipated that Stage 1 will open to traffic in August/September 2017. The remainder of the Project will open progressively as areas are completed.
Ā3	If there is any inconsistency between the above documents, the more recent document shall prevail to the extent of the inconsistency. However, the conditions of this approval shall prevail to the extent of any inconsistency.	Pre-construction Construction Operation	Pacific Complete	Noted
A4	The Applicant shall comply with any reasonable requirement(s) of the Secretary arising from the Department of Planning and Environment's assessment of: (a) any strategies, plans, programs, reviews, audits. reports or correspondence that are submitted in accordance with this approval; and (b) the implementation of any actions or measures contained in these documents.	Pre-construction Construction Operation	RMS Pacific Complete	Noted
A5	This approval shall lapse 10 years after the date on which it is granted, unless the works the subject of this SSI approval are physically commenced on or before that date.	Pre-construction	RMS	The project has physically commenced.
A6	The Applicant shall ensure that all licences, permits and approvals are obtained as required by law and maintained as required throughout the life of the SSI. No condition of this approval removes the obligation for the Applicant to obtain, renew or comply with such licences, permits or approvals.	Pre-construction Construction Operation	RMS/Contractor	Licences/Permits have been obtained for the EPL, water use and State Forest occupation permits and further licences/ permits will be applied for as construction proceeds. The project obtained approval from the Department of Crown Lands and Coffs Harbour City Counci to extract water from the Corindi Dam in November including a variation to the premise boundary. The project also acquired landowner agreements to extract water from private dams for dust management and construction water. The Project EPL was amended to include these areas. The Project EPL 20590 Annual Return was submitted to EPA in July 2017 as required under EPL Condition R1.
A7	The Applicant may elect to construct and/or operate the SSI in stages. Where staging is proposed, the Applicant shall submit a Staging Report to the Secretary prior to the commencement of each proposed stage. The Staging Report shall provide details of: (a) how the SSI would be staged, including general details of work activities associated with each stage and the general timing of when each stage would commence; and (b) details of the relevant conditions of approval, which would apply to each stage and how these shall be complied with across and between the stages of the SSI. Where staging of the SSI is proposed, these conditions of approval are only required to be complied with at the relevant time and to the extent that they are relevant to the specific stage(s).	Pre-construction	Pacific Complete	The Stage 1 Woolgoolga to Ballina Staging Report dated March 2015 was acknowledged by the Secretary on 30/04/2015. Version 6 of the W2B staging report was submitted to the Secretary in November 2016.
48	The Applicant shall ensure that any strategy, plan, program or other document required by the conditions of this approval and relevant to each stage (as identified in the Staging Report) is submitted to the Secretary no later than one month prior to the commencement of the relevant stage(s), unless otherwise agreed by the Secretary. Notes: While any strategy, plan or program may be submitted on a progressive basis, the Applicant will need to ensure that the existing operations on site are covered by suitable strategies, plans or programs at all times; and fit the submission of any strategy, plan or program is to be staged, then the relevant strategy, plan or program shall clearly describe the specific stage to which the strategy, plan or program applies, the relationship of this stage to any future stages, and the trigger for updating the strategy, plan or program.	Pre-construction	RMS	Noted. No further stage proposed for Section 1 at this time.
A9	The Applicant shall ensure that employees, contractors and sub-contractors are aware of, and comply with, the conditions of this approval relevant to their respective activities.	Pre-construction Construction Operation	Pacific Complete	This is addressed within the contract documents eg. CEMP/sub plans, design drawings, Specifications, contractors training /induction packages and also in documents such as EWMS's and Blast MP.
A10	The Applicant shall be responsible for environmental impacts resulting from the actions of all persons that it invites onto the site, including contractors, sub-contractors and visitors.	Construction	Pacific Complete	This is addressed within the contract documents eg. CEMP/sub plans, EWMS, ESCPlans, specifications, contractors training /inductions toolboxes, daily prestarts, etc.
A11	In the event of a dispute between the Applicant and a public authority, in relation to an applicable requirement in this approval or relevant matter relating to the SSI, either party may refer the matter to the Secretary for resolution. The Secretary's determination of any such dispute shall be final and binding on the parties.	Construction	Pacific Complete	Noted
A12	The Applicant shall notify the Secretary and relevant public authorities of any incident with actual or potential significant off-site impacts on people or the biophysical environment within 24 hours of becoming aware of the incident. The Applicant shall provide full written details of the incident to the Secretary within seven days of the date on which the incident occurred. Note: Where an incident also requires reporting to the EPA and/or OEH, the incident report prepared for the purposes of notifying the EPA and/or OEH would meet this requirement.	Construction Operation	Pacific Complete Contractors	This is addressed in RMS Specification G36 Clause 3.10, 4.14 Also addressed in the contractors CEMP and RMS environmental incident classification and reporting procedure.
A13	The Applicant shall meet the requirements of the Secretary or relevant public authority (as determined by the Secretary) to address the cause or impact of any incident, as it relates to this approval, reported in accordance with condition A12, within such period as the Secretary may require.	Construction Operation	Pacific Complete Contractors	Noted.

pproval						
31	The clearing of native vegetation shall be minimised with the objective of reducing impacts to any threatened species or EECs where feasible and reasonable, consistent with the following: (a) clearing of native vegetation shall be limited to a total area of 931.7 hectares, within the SSI boundary defined in the document referred to in condition A2(c),	All	All	Pre-construction Detailed Design	Pacific Complete Detailed Designers Contractors	RMS and the Contractor have ensured compliance with the approved clearing limits under the Planning Approval. Clearing of native vegetation has been minimised with a detailed design objective being to reduce impacts to any threatened species o
	subject to condition B1(b); (b) clearing of native vegetation for ancillary facilities specified in the document referred to in condition A2(d) and outside the SSI boundary defined in the					EECs where feasible and reasonable.
	document referred to in condition A2(c) shall be limited to 4.75 hectares; (c) clearing of threatened ecological communities shall be limited to the areas specified in Table 6-1 (under the column titled: Revised—direct impact (hectares)) of Appendix J of the document referred to in condition A2(c), subject to condition B1(d); (d) clearing of the Littoral Rainforest in the New South Wales North Coast, Sydney Basin and South East Corner Bioregions shall be limited to a total area of 0.5					Clearing limits are clearly shown on relevant construction drawings and closely tracked throughout the project. Clearing limits may change slightly with more detailed assessment. Clearing has been completed on Section 1. Minor changes have been required with minor design changes including fauna pole anchor blocks, hazardous trees, and operational basin pipework.
	hectares; and (e) clearing of Koala (Phascolarctos cinereus) primary and secondary habitat shall be limited to a total area of 375 hectares.					Not all clauses of this condition will apply to each stage. An assessment will be made as to the applicability of specific clauses prior to construction.
						Clearing has been previously reduced in some part of the project from the clearing limit as per detailed design, including Hawthorn Close and the northern extent on the south bound lanes.
B2	Where feasible and reasonable, remnant vegetation shall be retained between the SSI boundary and the SSI footprint.	All	All	Pre-construction Detailed Design	Pacific Complete Detailed Designers Contractors	Vegetation clearing limits have been defined during detailed design for Stage 1-4. Roads and Maritime is satisfied that this condition has been met. Clearing has been closely monitored throughout construction.
B3	Native vegetation shall be established in or adjacent to disturbed areas within the SSI boundary to provide habitat for wildlife following the completion of construction in the vicinity of the disturbed area, consistent with the Urban Design and Landscape Plan required under condition D20.	All	All	Construction	Pacific Complete Detailed Designers	Measures for native vegetation are included in the UDLP.
					Contractors	Progressive rehabilitation / stabilisation has been initiated on Section 1 and will continue throughout construction and into the operation phase
B4	Light spill from the SSI shall be avoided on Pink Underwing Moth and Atlas Rainforest Ground Beetle habitat, where feasible and reasonable.	10	Stage 2	Detailed Design Construction	Pacific Complete Detailed Designers Contractors	Stage 2
B5	Prior to construction, pre clearing surveys and inspections for endangered and threatened species shall be undertaken. The surveys and inspections, and any subsequent relocation of species, shall be undertaken under the guidance of a suitably qualified ecologist and shall be in accordance with the methodology	All	All	Pre-construction		Suitably Qualified Ecologists were engaged by the Contractors and was present prior to commencement of all clearing in any area to complete inspections and complete checklist and also during clearing of any habitat trees in accordance with the Construction Flora
	incorporated into the approved Construction Flora and Fauna Management Plan. All clearing of Koala habitat trees shall be undertaken in the presence of a Koala spotter.					and Fauna Management Plan. The qualified project ecologists were on site during all clearing activities including pre-clearing inspections in each area immediately
						prior to clearing. Post clearing reports have been prepared and forwarded to EPA (biodiversity).
B6	Incidental or unanticipated threatened flora and fauna finds shall be immediately reported and clearing work stopped in the vicinity of the find to allow for an evaluation of an appropriate response in accordance with the Construction Flora and Fauna Management Plan.	All	All	Pre-construction	Pacific Complete/ Contractors	Stage 1 projects have complied with this Condition of Approval. Specifics regarding unexpected finds for Stage 1 are available in the previous 6 monthly Compliance Tracking Reports.
						Whilst not previously recorded, the project ecologist identified <i>Eucalyptus tetrapleura</i> during the clearing phase the western side of the existing highway approx Ch 9800 in Section 1. An exclusion area was established and the seeds were collected for propagation and future translocated following consultation with the ERG. This unexpected find was commended by EPA. Three (3) threatened spotted young quolls was captured by the OHLY during November 2016 followed the mother and young quoll been hit by existing highway traffic. The young quolls were cared for by the Currumbin Wildife Sanctuary and were released in December 2016 in consultation with EPA, NPWS and RMS.
B7	High risk construction activities in known Oxleyan Pygmy Perch habitat shall not be undertaken during the Oxleyan Pygmy Perch spawning period, or on days when the relevant Bureau of Meteorology site predicts a 90% chance of 10mm of rain or more, unless otherwise agreed by DPI (Fisheries).	6, 7, 8, 9	Stage 2	Construction	Pacific Complete/ Contractors	Stage 2
B8	Temporary bridge or arch structures in known Oxleyan Pygmy Perch habitat shall be used if the crossing is intended to be in place for more than 3 months.	6, 7, 8, 9	Stage 2	Construction	Pacific Complete/Contractors	Stage 2
B9	Where temporary crossings in known Oxleyan Pygmy Perch habitat are proposed with culverts or pipes, the Applicant shall, in consultation with DPI (Fisheries): (a) determine the size of the culverts or pipes to facilitate fish passage; and (b) identify the minimum size of clean rock to be used to ensure that rock material will not wash into the waterway in periods of high flows. Temporary culvert or pipe crossings shall be removed prior to the start of the Oxleyan Pygmy Perch spawning period.	6, 7, 8, 9	Stage 2	Pre-construction Construction	Pacific Complete/Contractors	Stage 2
B10	Subject to conditions B11 and B12, the Applicant shall revise the Connectivity Strategy identified in the documents listed in condition A2(e), based on the outcomes of the Mitigation Framework required by condition D1. Note:	All	All	Pre-construction Detailed Design	Pacific Complete	Connectivity Strategy for Sections 1 & 2 was approved by DP&E on 11/5/15
D44	• The requirements for the Connectivity Strategy are contained in condition D2.	0.4.5.0.40.44	21	Dec construction	Decific Consulate /Detailed	
В11	As part of detailed design, the Applicant shall further investigate design refinements for fauna crossings and associated exclusionary measures, between station 41.500 and station 80.000 to improve connectivity for the Coastal Emu, and in the proximity of station 96.000 and between station 137.800 and station 159.700 to improve connectivity for the Koala. Any changes to fauna crossings and exclusionary measures shall be included in the Connectivity Strategy required under condition D2.		Stage 2	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	Stage 2
B12	Investigations into the location and design of connectivity structures, including but not limited to those identified in the documents listed under conditions A2(c) and A2(e), shall be undertaken during detailed design with the input of a suitably qualified and experienced ecologist. The investigations shall be undertaken in	All	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	Connectivity Strategy approved by DP&E on 11/5/15.
	consultation with the OEH, DPI (Fisheries) and DoE and include workshops and on-site ground verification. The results of these investigations shall be detailed in the Connectivity Strategy required under condition D2.					Required structures will be installed as per the Connectivity Strategy, if any issues are identified with structures during construction phase then consultation would be undertaken with the EPA and the ER to determine appropriate course of action.
B13	The Applicant shall minimise riparian vegetation clearing during construction and undertake a targeted rehabilitation program post construction to restore in-	All	All	Pre-construction		Clearing was reduced in some part of the project from the clearing limit, which is a positive outcome for the project, and this includes
	stream and riparian habitat to at least the pre-construction condition or better, unless otherwise agreed by DPI (Fisheries). All areas disturbed by the SSI that are in the vicinity of known Oxleyan Pygmy Perch habitat waterways shall be stabilised prior to the Oxleyan Pygmy Perch spawning period.			Detailed Design Construction Operation	Designers/Contractors	EECs and threatened species. Not applicable to known Oxleyan Pygmy Perch habitat on Sections 1 & 2.
B14	The SSI shall be constructed with the aim of achieving the construction noise management levels detailed in the Interim Construction Noise Guideline (DECC, 2009). All feasible and reasonable noise mitigation measures shall be implemented and any activities that could exceed the construction noise management levels shall be identified and managed in accordance with the Construction Noise and Vibration Management Plan.	All	All	Construction	Pacific Complete/Contractors	The NVMP for the Section 1 has been approved by DPE. Works have been undertaken in accordance with the approved NVMPlan.
	Note: The Interim Construction Noise Guideline identifies 'particularly annoying' activities that require the addition of 5dB(A) to the predicted level before comparing to the construction Noise Management Level.					

Ministers Condition Of Approval	Requirement	Section	Project Stage	Timing	Responsibility	Comment
B15	Construction activities associated with the SSI shall be undertaken during the following standard construction hours: (a) 7:00am to 6:00pm Monday to Friday, inclusive; and (b) 8:00am to 5:00pm Saturday; and (c) at no time on Sunday or public holidays.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP/ App D Out of Hours Work. Extended hours of work have been allowed in strategic locations and discussed with adjacent residents, EPA and the ERG. Refer to MCoA B16 below for details.
B16	Construction works outside the standard construction hours may be undertaken in the following circumstances: (a) construction works that generate noise that is: (I) no more than 5 dB(A) above rating background level at any residence in accordance with the Interim Construction Noise Guideline (DECC, 2009); and (ii) no more than the noise management levels specified in Table 3 of the Interim Construction Noise Guideline (DECC 2009) at other sensitive receivers; or (b) for the delivery of materials required outside the standard construction hours by the NSW Police Force or other authorities for safety reasons; or (c) where it is required in an emergency to avoid the loss of lives, property and/or to prevent environmental harm; or (d) between 6.00am and 7.00pm and 6.00pm and 7.00pm Monday to Friday (except public holidays) in sparsely populated areas (these construction hours may be reviewed and/or revoked by the Secretary in consultation with the EPA in the case of unresolved noise complaints); or (e) low noise impact activities and work between: (i) 6.00am and 7.00am Monday to Friday; and/or (ii) 6.00pm and 7.00pm Monday to Friday; or (f) works approved through an EPL; or (g) works approved by a Construction Environment Management Plan or Construction Noise and Vibration Management Plan for the SSI.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP/ App D Out of Hours Work. Extended work hours have been approved to the end of the project at Section 1 (W2HC) in accordance with the NVMP/ App D Out of Hours Work Procedure which implements the Conditions of MCoA B16 and EPL 20590 out of hours, in particular B16 (d) and (e) and EPL L5.2 and L5.3. .
B17	Construction activities which cannot be undertaken during the standard construction hours for technical or other justifiable reasons (Out of Hours work) may be permitted outside the standard construction hours with the approval of the Environmental Representative. Out of Hours work shall be undertaken in accordance with an approved Construction Environment Management Plan or Construction Noise and Vibration Management Plan for the SSI, where that plan provides a process for the consideration of Out of Hours work. This consideration includes: (a) process for obtaining the Environmental Representative's approval for Out of Hours work; (b) details of the nature and need for activities to be conducted during the varied construction hours; (c) justifies the varied construction hours in accordance with the Interim Construction Noise Guideline (DECC, 2009); (d) provides evidence that consultation with potentially affected receivers and notification of the relevant council has been undertaken, that the issues raised have been addressed and all feasible and reasonable mitigation measures have been put in place; and (e) provides evidence of consultation with the EPA on the proposed variation in standard construction hours.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP/ App D Out of Hours Work. Multiple Out of Hours Work permits have been issued, including works for paving and batch plant operations. Respite has been offered and accepted by a sensitive receiver on Kangaroo Trail Road as part of the extended hours for these activities.
B18	Construction activities resulting in impulsive or tonal noise emission (such as rock breaking, rock hammering, pile driving) shall only be undertaken: (a) between the hours of 8:00am to 5:00pm Monday to Friday; (b) between the hours of 8:00am to 1:00pm Saturday; and (c) in continuous blocks not exceeding three hours each with a minimum respite from those activities and works of not less than one hour between each block. For the purposes of this condition 'continuous' includes any period during which there is less than a one hour respite between ceasing and recommencing any of the work the subject of this condition. The works subject to this condition may be undertaken in sparsely populated areas within the standard construction hours.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP/ App D Out of Hours Work. Works have been undertaken in accordance with the approved NVMPlan.
B19	The Applicant shall, where feasible and reasonable, limit high noise impact activities and work to the mid-morning and mid-afternoon periods, except in sparsely populated areas.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP/ App D Out of Hours Work. Blasting has been restricted to these hours as per the Blast MP. Production blasting has been completed on the project. No further blasting is required for Section 1.
B20	The SSI shall be constructed with the aim of achieving the following construction vibration goals: (a) for structural damage to heritage structures, the vibration limits set out in the German Standard DIN 4150-3: Structural Vibration – Part 3 Effects of vibration on structures; (b) for damage to other buildings and/or structures, the vibration limits set out in the British Standard BS 7385-1:1990 – Evaluation and measurement of vibration in buildings—Guide for measurement of vibration and evaluation of their effects on buildings (and referenced in Australian Standard 2187.2 – 2006 Explosives – Storage and use – Use of explosives); and (c) for human exposure, the acceptable vibration values set out in Assessing Vibration: A Technical Guideline (Department of Environment and Conservation,	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP.Works have been undertaken in accordance with the approved NVMPlan.
B21	Blasting associated with the SSI shall only be undertaken during the following hours: (a) 9:00am to 5:00pm, Monday to Friday, inclusive; (b) 9:00am to 1:00pm on Saturday; and (c) at no time on Sunday or public holidays. Blasting outside the above hours and in accordance with the standard construction hours where: (i) no sensitive receivers in sparsely populated areas would be impacted by blasting; or (ii) an agreement has been made with receivers within 200 metres of the blast zone to permit blasting in accordance with the standard construction hours. This condition does not apply in the event of a direction from the NSW Police Force or other relevant authority for safety or emergency reasons to avoid loss of life, property loss and/or to prevent environmental harm.	All	All	Construction	·	Addressed in the approved NVMP. Also addressed in the Blast MP, which has been approved by RMS. All blasts comply with the specified time restrictions. The currently approved blasting & vibration limits are 125dB blast overpressure and 25mm/s peak particle velocity, with no exceedances recorded to date. No complaints have been received regarding blasting.
B22	The Applicant shall ensure that Air blast overpressure generated by blasting associated with the SSI shall not exceed the criteria specified in Table 1 when measured at the most affected residence or other sensitive receiver. Note a sensitive site includes houses and low rise residential buildings, theatres, schools and other similar buildings occupied by people.	All	All	Construction	Pacific Complete/Contractors	Addressed in the approved NVMP. Also addressed in the Blast MP, which has been approved by RMS. Blast Monitoring confirms that Air Blast Overpressure has complied with the specified limits for all blasts at the nearest residence/sensitive receiver. Monitoring results are reported at monthly ERG meetings & EPL monthly reporting. No concerns have been raised.
B23	The Applicant shall ensure that Ground vibration generated by blasting associated with the SSI shall not exceed the criteria specified in Table 2 and Table 3 when measured at the most affected residence or other sensitive receiver. Note a sensitive site includes houses and low rise residential buildings, theatres, schools and other similar buildings occupied by people.	All	All	Construction	Pacific Complete/Contractors	Addressed in approved NVMP. Also addressed in the Blast MP, which has been approved by RMS. Blast Monitoring confirms there have been no exceedances in accordance with the project EPL 20590.
B24	The blasting criteria specified in conditions B22 and/or B23 may be increased where the Applicant has obtained the written agreement of the relevant landowner to increase the criteria. In obtaining the agreement the Applicant shall make available to the landowner: (a) details of the proposed blasting program and justification for the proposed increase to blasting criteria including alternatives considered (where relevant); (b) the environmental impacts of the increased blast limits on the surrounding environment and most affected residences or other sensitive receivers including, but not limited to noise, vibration and air quality and any risk to surrounding utilities, services or other structures; and (c) the blast management and mitigation measures, and the procedures to be implemented to monitor blasting impacts. The Applicant shall provide a copy of the written agreement to the Secretary and the EPA, including details of the consultation undertaken (with clear identification of proposed blast limits and potential property impacts) prior to commencing blasting at the increased limits. Unless otherwise agreed by the Secretary, the following exclusions apply to the application of this condition: (a) Any agreements reached may be terminated by the landowner at any time should concerns about the increased blasting limits be unresolved. Should an agreement be terminated by a landowner, the Applicant shall not exceed the criteria specified in conditions B22 and/or B23 for future blasting at that receiver. (b) The blasting limit agreed to under any agreement for an occupied residential building can at no time exceed a maximum Peak Particle Velocity vibration level of 25 mm/s or maximum Air blast Overpressure level of 125 dBL.	All	All	Construction	Pacific Complete/Contractors	Addressed in approved NVMP. Also addressed in the Blast MP, which has been approved by RMS. The currently approved blasting & vibration limits are 125dB blast overpressure and 25mm/s peak particle velocity.

Ministers Condition Of	Requirement	Section	Project Stage	Timing	Responsibility	Comment
Approval						
B25	Wherever feasible and reasonable, piling activities shall be undertaken using quieter construction methods, such as bored piles or vibrated piles rather than impact or percussion piling methods.	All	All	Construction	Pacific Complete/Contractors	Only bored piles were used on the project including the use of polymer which removes the need for any driving or vibrating piles.
B26	Prior to the use of the dynamic compaction construction method, the Applicant shall undertake an assessment of vibration generated by dynamic compaction on nearby sensitive receivers. Feasible and reasonable mitigation measures shall be implemented to minimise vibration impacts.	All	All	Construction	Pacific Complete/Contractors	Assessment has been completed and included in Section 7.3 of the CNVMP.
B27	During construction, affected educational institutions shall be consulted and reasonable steps taken to ensure that noise generating construction works in the vicinity of affected buildings are not timetabled during examination periods where practicable, unless other reasonable arrangements to the affected institutions	4, 5, 8, 9	Stage 2	Construction	Pacific Complete/Contractors	Stage 2
B28	are made at no cost to the affected institution. The SSI shall be designed and operated with the objective of not exceeding the road noise criteria outlined in the NSW Road Noise Policy (DECCW, 2011).	All	All	Detailed Design Operation	Pacific Complete/Contractors	Operational Noise Management Report (ONMR) was submitted to DP&E and approved on 2 June 2015. Acoustic treatments to properties identified in the ONMR are ongoing until completion of all identified residences in the ONMR.
B29	Where feasible and reasonable, operational noise mitigation measures shall be implemented at the start of construction (or at other times during construction) to minimise construction noise impacts.	All	All	Detailed Design Operation	Pacific Complete/Contractors	RMS has engaged a consultant to scope the 'At House Noise Treatment' for each property identified in the Operational Noise Management Report (ONMR). Acoustic treatments to properties identified in the ONMR are ongoing until completion of all identified residences in the ONMR.
B30	Except as may be expressly provided by an EPL, the Applicant shall comply with section 120 of the Protection of the Environment Operations Act 1997.	All	All	Construction	Pacific Complete/Contractors	All works are been undertaken to meet the objectives of Section 120.
B31	The hydrological and flooding impacts resulting from the SSI are to be assessed during detailed design against the 'Design Objectives for Flood Management' described in Section 2.1 of the EIS Working Paper – Hydrology and Flooding. This shall include assessment against the 'Flood Management Objectives' and the 'Other Flood Impact Considerations' as well as the other requirements of this section of the EIS. The hydrology assessment shall include the refinement of or development of new flood models (where required) for the 14 catchments investigated during the EIS. These models shall be operated for the same design floods considered in the EIS, as well as the 2000 year ARI and the probable maximum flood (PMF) design events.	All	Ail	Pre-construction Detailed Design		Hydrological Mitigation Report for Corindi (Section 1) was submitted for approval to DP&E on 1/05/15 . The HMR was approved by the Secretary on the 4/6/15.
B32	For the Corindi, Shark Creek and Farlows Flat areas, flooding and hydrological impacts resulting from existing highway infrastructure shall be assessed. As part of this assessment, flood models shall assess the impacts of recent highway upgrades in this area. Where the existing highway in these areas has resulted in adverse flooding and/or hydrological impacts, opportunities to reduce the quantum of these impacts shall be considered during the detailed design of the SSI, where feasible and reasonable.	1,4,5	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	Corindi Creek is within the Section 1 project area. Farlows Flat and Shark Creek are within the Wave 1 and Wave 3 project areas. The Hydrological Mitigation Report for Corindi was submitted for approval to Dept of Planning on the 1/5/15 and approved by the Secretary on the 4/6/17. As outlined in the report, RMS is undertaking community consultation on the Blackadder Safety works mitigation. This work is proposed to be undertaken following the upgrade of Section 1.
B33	Where the objectives and considerations referred to in condition B31 cannot be complied with, the Applicant shall: (a) achieve compliance through modified embankment or drainage design. This might include new or duplicated drainage structures designed to minimise afflux and other impacts to waterways that traverse the road alignment, to the greatest extent practicable; or (b) achieve an acceptable level of mitigation of impacts through alternative design measures (e.g. raised access tracks) in consultation with the affected landowner; or (c) reach agreement with affected landowners on impacts to property.	All	All	Pre-construction Detailed Design	RMS/ Pacific Complete/Detailed Designers	Hydrological Mitigation Report for Corindi was submitted for approval to DP&E on 1/05/15. Where the flood management objectives have not been achieved for Corindi, land -owner consent has either been granted (for property already acquired) or is being sought for those currently in acquisition. There are no temporary creek crossings currently in place on Section 1. All creek crossings are now in their permanent formation and accessible to construction traffic.
B34	Soil and water management measures consistent with Managing Urban Stormwater - Soils and Construction Vols 1 and 2, 4th Edition (Landcom, 2004) and Managing Urban Stormwater Soil and Construction Vols 2A and 2D Main Road Construction (Department of Environment and Climate Change, 2008) shall be employed during the construction of the SSI to minimise soil erosion and the discharge of sediment and other pollutants to land and/or water.	All	All	Detailed Design Construction	Pacific Complete/Contractors	Addressed in CEMP and SWMP, regular and updated ESCPs and inspections by the Contractor and RMS. In addition, RMS and OHLY each employ a soil conservationist to assist with soil conservation challenges on Section 1.
B35	Where available, and of appropriate chemical and biological quality, stormwater, recycled water or other water sources shall be used, where feasible and reasonable, in preference to potable water for construction activities, including concrete mixing and dust control.	All	All	Construction	Pacific Complete/Contractors	Collected site runoff in containment areas, tannin sumps, drain water & other areas are been continuously reused on the project for dust suppression and construction water. Due to the current stage of the project, less construction water is required, specifically (90% is currently paved or sealed).
B36	All surface water and groundwater shall be adequately treated as far as is practicable, prior to entering the stormwater system to protect the receiving water source quality.	All	All	Construction	Pacific Complete/Contractors	Addressed in SWMP, ESCPs and EPL 20590.
B37	Prior to the commencement of site preparation and excavation activities, or as otherwise agreed by the Secretary, in areas identified as having a moderate to high risk of contamination, a site audit shall be carried out by a suitably accredited contaminated site auditor. A Site Audit Report is to be prepared by the site auditor detailing the outcomes of Phase 2 contamination investigations within these areas. The Site Audit Report shall detail, where relevant, whether the land is suitable (for the intended land use) or can be made suitable through remediation. Where the investigations identify that the site is suitable for the intended operations and that there is no need for a specific remediation strategy, measures to identify, handle and manage potential contaminated soils, materials and groundwater shall be identified in the Site Audit Report and incorporated into the Construction Environmental Management Plan. Where the investigations identify that the site is suitable for the intended operations and that a remediation strategy is required, the Site Audit Report shall include a remediation strategy for addressing the site contamination, and how the environmental and human health risks will be managed during the disturbance, remediation and/or removal of contaminated soil or groundwater, and be incorporated into the Construction Environmental Management Plan. Where remediation is required, a Site Audit Statement(s) shall be prepared verifying that the site has been remediated to a standard consistent with the intended land use. Note • Terms used in this condition have the same meaning as in the Contaminated Land Management Act 1997.	All - TBC	All	Pre-construction Construction	Pacific Complete/Contractors	Contamination investigations have not identified any moderate to high risk areas within the section 1 and 2 project areas. For Section 1, An additional area of potential contamination was investigated at properties which were demolished by contamination specialists but no ground contamination was identified, however asbestos containing material was lawfully removed and disposed of.
B38	Watercourse crossings shall be designed and constructed in consultation with the DPI (Fisheries), EPA, NOW and DoE, and where feasible and reasonable, be consistent with the Guidelines for Controlled Activities Watercourse Crossings (Department of Water and Energy, February 2008), Why do Fish Need to Cross the Road? Fish Passage Requirements for Waterway Crossings (Fairfull and Witheridge, 2003), Policy and Guidelines for Fish Friendly Waterway Crossings (NSW Fisheries, February 2004), and Policy and Guidelines for Fish Habitat Conservation and Management (DPI Fisheries, 2013). Where multiple cell culverts are proposed for crossings of fish habitat streams, at least one cell shall be provided for fish passage, with an invert or bed level that mimics watercourse flows.	All	All	Pre-construction Detailed Design		Significant consultation with agencies has occurred during detailed design for permanent crossings, and will also be undertaken during construction phase by the contractor. All temporary creek crossings have been removed on Section 1 as permanent crossings are in place and operational.

Ministers Condition Of Approval	Requirement	Section	Project Stage	Timing	Responsibility	Comment
B39	All crossings of known Giant Barred Frog habitat or waterways with the confirmed presence of the species shall be designed and constructed with bridges. Should the Applicant construct a crossing structure other than a bridge, the Applicant shall demonstrate maintained connectivity for the Giant Barred Frog upstream and downstream of that crossing for a monitoring period of three consecutive years, or such other period agreed by the Secretary in consultation with the OEH. Demonstration of maintained habitat connectivity shall: (a) be based on baseline data that confirms the presence, nature and distribution of Giant Barred Frog population using a survey methodology that has been endorsed by the OEH, and detailed in the Mitigation Framework required in condition D1, and an assessment of the connectivity of the crossing site prior to commencement; or, if adequate baseline data is not provided to the satisfaction of the Secretary, be based on the assumption of occurrence of a population on either side of the crossing site; and (b) be based on evidence that the Giant Barred Frog has remained present upstream and downstream of the crossing site for the monitoring period, with periodic monitoring to occur at least biannually. Should the results of any instance of periodic monitoring record an absence of the Giant Barred Frog, the Applicant shall be required to demonstrate that this change is not as a result of the SSI within one month of the completion of that instance of periodic monitoring, to the satisfaction of the Secretary. Should the Secretary not be satisfied that the change is not a result of the SSI will be deemed as the cause of the impact and the Applicant shall offset the loss of the habitat in accordance with this approval.		Stage 1	Pre-construction Detailed Design		For section 1 and Section 2, this has been addressed in detailed design to avoid impact to known Frog habitat. Bridges at Halfway Creek are used in GBF habitat. Due to the find of a Giant Barred Frog on the downstream side of the culvert at Boney's Creek during construction, a monitoring regime will be established in accordance with the requirements of B39, which will include monitoring for 3 consecutive years post construction. It is important to note that no Giant Barred Frogs or suitable habitat has ever been confirmed upstream of the Highway crossing point of Boney's Creek. Fourteen (14) Giant Barred Frogs were recorded during a recent targeted monitoring survey (as per the Plan) upstream a nd downstream of Corindi Creek.
B40	Unless otherwise agreed by DPI (Fisheries), all crossings of Class 1 watercourses in known Oxleyan Pygmy Perch habitat shall be designed and constructed with a bridge or arch structure and, where feasible and reasonable, no supporting structures shall be installed within affected waterways.	6, 7, 8, 9	Stage 2	Pre-construction Detailed Design	Pacific Complete/Detailed Designers/Contractors	Stage 2
B41	Where an Oxleyan Pygmy Perch habitat waterway is realigned or its stream profile is changed, or an in-stream structure is installed in the waterway (both permanent and temporary construction structures), the Applicant shall ensure that the final design of that waterway does not result in water velocities exceeding 0.4 metres per second under normal flow conditions. The Applicant shall determine normal flow conditions to the satisfaction of DPI (Fisheries) through baseline monitoring of known Oxleyan Pygmy Perch habitat waterways.	6, 7, 8, 9	Stage 2	Detailed Design	Pacific Complete/Detailed Designers	
B42	The Applicant shall ensure that the SSI does not increase the afflux of waterways with known Oxleyan Pygmy Perch habitat by more than the relevant flood management objective in the documents referred to in condition A2 for flood events up to the 1 in 100 year event.	6, 7, 8, 9	Stage 2	Pre-construction Detailed Design	Pacific Complete/Detailed Designers/Contractors	Stage 2
B43	The Applicant shall investigate the removal of the proposed embankment at station 145.2 and its replacement with an extension of the Richmond River bridge. The investigation shall consider issues around hydrology and flooding (including meeting the flooding objectives for bridges), constructability, cost, funding arrangements and visual impacts. The investigation shall include consideration of other relevant environmental impacts (noise, heritage, biodiversity, traffic etc.) and consider any alternative options. A copy of the investigation shall be submitted to the Secretary prior to the commencement of any bridge approach or embankment works in the vicinity.	10	Stage 2	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	Stage 2
B44	Prior to the commencement of construction affecting PAD site WWC Dirty Creek 1 and ancillary facilities at Section 4, Site 1; Section 4, Site 3; Section 7, Site 1; Section 10, Site 1a; and Section 11, Site 1a , the Applicant shall: (a) undertake field investigation, and where required, an archaeological investigation of the site(s) using a methodology generally consistent with testing undertaken for the Environmental Impact Statement, and prepared in consultation with the OEH (Aboriginal heritage) and the Registered Aboriginal Parties; and (b) prepare a report on the results of the archaeological investigation, including recommendations (such as further archaeological work) in consultation with the OEH and to the satisfaction of the Secretary, and shall include, but not necessarily be limited to: (i) consideration of measures to avoid or minimise disturbance to Aboriginal objects where objects of moderate to high significance are found to be present; (ii) recommendations for further investigations under condition B45 where impacts cannot be avoided; and (iii) details of management and mitigation measures to ensure there are no additional impacts due to pre-construction and construction activities; and (c) submit the report to the Registered Aboriginal Parties, the OEH (Aboriginal heritage) and the Secretary.	1, 4, 7, 10, 11	All	Pre-construction	RMS/Pacific Complete	Test excavations have been undertaken on WWC Dirty Creek 1, which was assessed as being of no archaeological potential and no archaeological significance. All PAD sites in section 1 will be cleared by the 3/7/15. All Aboriginal heritage investigations have been completed for Section 1.
B45	Prior to the commencement of construction activities affecting Aboriginal sites WWC39, WWC46, Tyndale 2 site, IR2W4, Site 11, E2/2, WWC37, Dubaljeen site (New Italy 1), The Gap Road 1, WX21 Site 8, Site 1, Site 2, Site 3 and Site 4 and sites recommended by condition B44 for further investigation, the Applicant shall: (a) develop a detailed salvage strategy, prepared in consultation with the OEH (Aboriginal heritage) and the Registered Aboriginal Parties. The salvage strategy shall be prepared to the satisfaction of the Secretary, and (b) undertake any further archaeological excavation works recommended by the results of the detailed salvage strategy. Within twelve months of completing the above work, unless otherwise agreed by the Secretary, the Applicant shall prepare a report containing the findings of the excavations, including artefact analysis and Aboriginal Site impacts Recording Forms (ASIR), and the identification of final storage location for all Aboriginal objects recovered (testing and salvage), in consultation with the Registered Aboriginal Parties, the OEH (Aboriginal heritage) and to the satisfaction of the Secretary. The report shall be submitted to the Registered Aboriginal Parties, the OEH (Aboriginal heritage) and the Secretary. Note: Where archaeological testing has occurred as part of the environmental assessment and the results are included in the documents listed in condition A2, the sites tested shall be included in the final report prepared under condition B45.	3, 4, 7, 8, 9, 10,	1 All	Pre-construction	RMS/Pacific Complete	Salvage strategy approved by DP&E in late August 2014. Salvage not anticipated to be completed until June 2015 for W2IR area and September 2015 for IR2W area. All Aboriginal heritage investigations have been completed for Section 1.
B46	Identified impacts to Aboriginal heritage, shall be minimised to the greatest extent practicable through both detailed design and construction, particularly with regard to the Aboriginal sites Gittoes Jali and the Melino site, and the Aboriginal culturally significant places identified as Corindi Massacres (section 1), Burials (section 1), Halfway Creek Ceremonial Site, Birrugan and Mindi spiritual sites (sections 1, 2, 5 and 10), Pillar Valley men's and women's sites, Place I, Place I and Place J. Where impacts are unavoidable, works shall be undertaken in accordance with the strategy outlined in the Construction Heritage Management Plan.	1,2, 3, 8, 9 10, 1	1 All	Pre-construction Detailed Design Construction		The EA process and Detailed design has been undertaken with the objective to minimise to the greatest extent practicable impacts to Aboriginal heritage. All Aboriginal heritage investigations have been completed for Section 1. Where impacts are unavoidable in construction, works would be undertaken in accordance with the strategy outlined in the Construction Heritage Management Plan.
B47	The Applicant shall not destroy, modify or otherwise physically affect Aboriginal sites WWC5, WWC7, WWC26, WWC92, WWC115, WWC139, Tyndale 1, Scarred/engraved Tree (section 7), C3/2/2, Saw Pit Creek / New Italy, Gittoes Jali 2, Cooks Hill, Broadwater, Law PAD, Law Scarred Tree, MST 3, C21, Melino Scarred Tree 4, MST 2, MST1, Rudgley Scarred Tree or Saezza 1.	2, 4, 7, 8, 9, 10,	All	Pre-construction Detailed Design Construction	Pacific Complete/Detailed Designers/Contractors	These sites were identified within the contract documents, CEMP, design packages and sensitive area plans. Also captured within training packages and inductions for contractors. None of the identified sites were physically affected, modified or destroyed throughout construction at Section 1 or 2.
B48	Prior to the commencement of construction affecting the Convent (12-14 Rivers Street), Harwood (item 21), the Applicant shall carry out further historical research and investigate the options for relocation of the convent building, in consultation with the Department of Planning and Environment and the OEH (Heritage Division), to the satisfaction of the Secretary.	5	Stage 2	Pre-construction Detailed Design Construction	RMS/Pacific Complete	Stage 2
B49	Prior to the commencement of construction in proximity to the following heritage items: 21; 23 (Roder's well and orchard); 26; 28; 29; and 43, the Applicant shall complete all archival recordings, including photographic recording of these heritage items, unless otherwise agreed by the Secretary. The archival recording shall be undertaken by an experienced heritage consultant, in accordance with the Guidelines issued by the Heritage Council of NSW. The areas containing these items shall be clearly identified and/or fenced until the completion of the archival recordings. Within 6 months of completing the archival recording, the Applicant shall submit a report containing the archival and photographic recordings and the historical research, where required, to the Department of Planning and Environment, the Heritage Council of NSW, and the local library and the local Historical Society in the relevant local government area(s).	5, 7, 9, 10	Stage 2	Pre-construction	RMS/Pacific Complete	Stage 2

Ministers Condition Of Approval	Requirement	Section	Project Stage	Timing	Responsibility	Comment
B50	Prior to construction affecting the following heritage items: 7; 23 (Roder's well and orchard) and 28, the Applicant shall carry out further historical and physical archaeological investigations of these heritage items, in consultation with the Department of Planning and Environment and the OEH (Heritage Division), to the satisfaction of the Secretary. These investigations shall: (a) include archaeological investigations and excavation in accordance with the Heritage Council's Archaeological Assessments Guideline (1996) using a methodology prepared, in consultation with the OEH (Heritage Division), and to the satisfaction of the Secretary. The archaeological investigation shall be undertaken by an archaeological heritage consultant, whose appointment has been endorsed by the Secretary. The nomination for the Excavation Director shall demonstrate ability to comply with the Heritage Council's Criteria for the Assessment of Excavation Directors (July 2011); (b) provide for the detailed analysis of any heritage items discovered during the investigations; (c) include management options for these heritage items (including options for relocation and display); and (d) if the findings of the investigations are significant, provide for the preparation and implementation of a heritage interpretation plan. Within 12 months of completing the above work, unless otherwise agreed by the Secretary, the Applicant shall prepare a report containing the findings of the exavations, including artefact analysis, and the identification of a final repository for finds, prepared in consultation with the OEH (Heritage Division) and to the satisfaction of the Secretary. The report shall be submitted to the Department of Planning and Environment, the Heritage Council of NSW, and the local library and the local Historical Society in the relevant local government area(s). Note: • Where archaeological testing has occurred as part of the environmental impact assessment for the SSI and the results are included in the documents listed in c	2, 7, 9	All	Pre-construction	RMS/Pacific Complete	NA for Section 1
B51	The Applicant shall not destroy, modify or otherwise physically affect the heritage items listed in Table 5-1, Historic (non-Aboriginal) Heritage Assessment Working Paper and Table 3-38, Submissions/Preferred Infrastructure Report (RMS, November 2013).	1, 5, 7, 10	All	Pre-construction Detailed Design Construction		For section 1, management and mitigation of these items will be addressed within the Construction Heritage Management Plan - for section 1 impact to be avoided on Tree stumps at Milleara/Halfway Creek Post office Lane stockyards, Corindi Beach is within the Section 1 project area.
B52	Identified impacts to heritage sites shall be minimised where feasible and reasonable through both detailed design and construction, particularly with regard to the historic site known as the North Coast Railway Branch Tramway, Glenugie. Where impacts are unavoidable, works shall be undertaken in accordance with the actions to manage heritage construction impacts required by condition D26(d) and under the guidance of an appropriately qualified heritage specialist.		Stage 1	Pre-construction Detailed Design Construction		NA NA
B53	This approval does not allow the Applicant to destroy, modify or otherwise physically affect human remains as part of the SSI.	All	All	Pre-construction Detailed Design	Pacific Complete/Contractors	Noted. Addressed in the Construction Heritage Management Plan.
B54	The Applicant shall not destroy, modify or otherwise physically affect any heritage items outside the SSI footprint, unless otherwise agreed by the Secretary in accordance with condition B78.	All	All	Construction Pre-construction Detailed Design Construction	Pacific Complete/Detailed Designers/Contractors	Noted. Addressed in the Construction Heritage Management Plan.
B55	The measures to protect heritage sites near or adjacent to the SSI during construction shall be detailed in the Construction Heritage Management Plan.		All	Pre-construction		Addressed in the Construction Heritage Management Plan.
B56	The SSI shall be designed with the objective of minimising adverse changes to existing access arrangements and services for other transport modes and, where feasible and reasonable, facilitate an improved level of access and service to other transport modes comparable to or better than the existing situation.	All	All	Pre-construction Detailed Design Construction	Pacific Complete/Contractors	This has been achieved and addressed during detailed design.
B57	Safe pedestrian and cyclist access through or around worksites shall be maintained during construction. In circumstances where pedestrian and cyclist access is restricted due to construction activities, a satisfactory alternate route shall be provided and signposted.	All	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	Addressed via Traffic Management Plan and traffic control plans via compliance with G10 specification.
B58	Construction vehicles (including staff vehicles) associated with the SSI shall be managed to: (a) minimise parking or queuing on public roads; (b) minimise idling and queuing in local residential streets where practicable; (c) minimise the use of local roads (through residential streets and town centres) to gain access to construction sites and compounds; and (d) adhere to the nominated haulage routes identified in the Construction Traffic Management Plan.	All	All	Pre-construction Construction	Pacific Complete/Contractors	This has been achieved by providing ample parking on the construction site resulting in no parking on local roads or idling vehicles in this area. Designated parking bays have been positioned in all work areas from Eggins Road to chainage 1428 where culverts are currently been constructed for construction vehicles including workers private vehicles. These areas are demarcated using blue flagging. Where possible, the project have prioritised access through the alignment to avoid use of local roads, including staging of works to minimise disruption to public motorists. Opening up the main alignment to create a continual haul route for moxie's and dump trucks to cart material through the project to reduce truck and dog haulage on the Highway has occurred with early planning. The project VMP's are regularly updated to reflect changing traffic conditions.
B59	In relation to new or modified local road, parking, pedestrian and cycle infrastructure, the SSI shall, where feasible and reasonable, be designed: (a) in consultation with the relevant council; (b) take into consideration existing and future demand, road safety and traffic network impacts; (c) to meet relevant design, engineering and safety guidelines, including Austroads Guide to Traffic Engineering Practice; and (d) be certified by an appropriately qualified person that has considered the above matters.	All	All	Construction	Pacific Complete/Contractors	This has been achieved and addressed during detailed design.
B60	The Applicant shall ensure that the SSI is designed to minimise land take impacts to surrounding properties (including agricultural properties) as far as feasible and reasonable, in consultation with the affected landowners.	All	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	This has been a consideration during the EA, concept design through to the detailed design and Implementation phase. The project has been able to reduce clearing at an adjacent property has assisted a local landowner.
B61	Where the viability of existing agricultural operations are identified to be impacted by the land requirements of the SSI, the Applicant shall, at the request of these landowners, employ a suitably qualified and experienced independent agricultural expert, whose appointment has been endorsed by the Secretary, to assist in identifying alternative farming opportunities for the land, including purchase of other residual land to enable existing agricultural activities to continue.	All	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	During the consultation process for the EIS/SPIR, and as required during the acquisition process, agricultural needs have been considered and addressed by design changes and/or compensation.
B62	Unencumbered access to private property shall be maintained during construction unless otherwise agreed with the landowner in advance. A landowner's access that is physically affected by the SSI shall be reinstated to at least an equivalent standard, in consultation with the landowner.	All	All	Pre-construction	Pacific Complete/Detailed Designers	This has been achieved throughout construction and shall continued through duration of construction. No issues or complaints received from any residents.
B63	The Applicant shall, in consultation with relevant landowners, construct the SSI in a manner that minimises intrusion and disruption to agricultural operations/activities in surrounding properties (e.g. stock access, access to farm dams, etc.), unless otherwise agreed by the landowner.	All	All	Detailed Design Construction		Impact to agricultural activities has been minimised as far as possible. During construction, the project have assisted landowners with property access and stock access.
B64	Any damage caused to property as a result of the SSI shall be rectified or the landowner compensated, within a reasonable timeframe, with the costs borne by the Applicant. This condition is not intended to limit any claims that the landowner may have against the Applicant.	All	All	Construction	Pacific Complete/Detailed Designers	No issues to date. Pre-construction building condition inspections have been completed for all structures within the zones specified within Specification G36, with post construction inspections to be completed following construction. Any identified damage will be rectified.

B65	Where the SSI traverses a state forest, the Applicant shall, in consultation with the NSW Forestry Corporation, ensure that construction does not unduly disrupt existing forestry activities, access for fire fighting and access for other activities within state forests, unless otherwise agreed by the NSW Forestry Corporation.	All	All	Construction	Pacific Complete/Contractors	There has been no disruption to State Forest activities. 4.5Ha of land has been approved by Forest Corporation by Forest Occupation Permit for construction of temporary sedimentation basins. These areas will be rehabilitated to satisfaction of Forestry Corporation as per lease conditions prior to completion of construction.
B66	The SSI shall be constructed in a manner that minimises dust emissions from the site, including wind-blown and traffic-generated dust and tracking of material onto public roads. All activities on the site shall be undertaken with the objective of preventing visible emissions of dust from the site. Should such visible dust emissions occur at any time, the Applicant shall identify and implement all feasible and reasonable dust mitigation measures, including cessation of relevant works, as appropriate, such that emissions of visible dust cease.	3, 6, 7	All	Construction	Pacific Complete/Contractors	Addressed in Air Quality MP and construction mitigation measures used on site.
В67	Dangerous goods, as defined by the Australian Dangerous Goods Code, shall be stored and handled strictly in accordance with: (a) all relevant Australian Standards; (b) for liquids, a minimum bund volume requirement of 110% of the volume of the largest single stored volume, within the bund; and (c) the Environment Protection Manual for Authorised Officers: Bunding and Spill Management, technical bulletin (Environment Protection Authority, 1997). In the event of an inconsistency between the requirements listed from (a) to (c) above, the most stringent requirement shall prevail to the extent of the inconsistency.	All	All	Pre-construction Construction	Pacific Complete/Contractors	Addressed in Waste and Energy MP.
B68	Waste generated outside the site shall not be received at the site for storage, treatment, processing, reprocessing, or disposal on the site, except as expressly permitted by a licence or waste exemption under the Protection of the Environment Operations Act 1997, if such a licence is required in relation to that waste.	All	All	Construction	Pacific Complete/Contractors	All waste managed in accordance with Construction Waste and Energy Management Plan.
B69	The reuse and/or recycling of waste materials generated on site shall be maximised as far as practicable, to minimise the need for treatment or disposal of those materials off site.	All	All	Construction	Pacific Complete/Contractors	All waste managed in accordance with Construction Waste and Energy Management Plan.
B70	All liquid and/or non-liquid waste generated on the site shall be assessed and classified in accordance with Waste Classification Guidelines (Department of Environment, Climate Change and Water, 2009).	All	All	Construction Operation	Pacific Complete/Contractors	All waste disposed of in accordance with Construction Waste and Energy Management Plan.
B71	All waste materials removed from the site shall only be directed to a waste management facility or premises lawfully permitted to accept the materials.	All	All	Construction Operation	Pacific Complete/Contractors	Waste is managed in accordance with Construction Waste and Energy Management Plan. Some waste can be beneficially reused as per POEO s143 permit in accordance with G36 4.11. The project has adopted the waste reduce, reuse and recycle principles with all construction materials.
B72	Utilities, services and other infrastructure potentially affected by construction and operation shall be identified prior to construction to determine requirements for access to, diversion, protection, and/or support. Consultation with the relevant owner and/or provider of services that are likely to be affected by the SSI shall be undertaken to make suitable arrangements for access to, diversion, protection, and/or support of the affected infrastructure as required. The cost of any such arrangements shall be borne by the Applicant.	All	All	Construction Operation	Pacific Complete/Contractors	This has been addressed during detailed design and during construction.
B73	The sites for ancillary facilities that are associated with the construction of the SSI and that have not been identified and assessed in the documents listed in condition A2 shall: (a) be located more than 50 metres from a waterway (100 metres for a State Environmental Planning Policy No. 14 wetland or known Oxleyan Pygmy Perch habitat waterway); (b) not impact on connectivity structures or vegetation leading to a connectivity structure; (c) be located within or adjacent to the SSI boundary; (d) have ready access to the road network; (e) be located in areas of low ecological significance and require no clearing of native vegetation; (f) be located more than 50 metres from threatened species and endangered ecological communities and their habitats; (g) be located no relatively level land; (h) be separated from the nearest residences by at least 200 metres (or at least 300 metres for a temporary batching plant) and comply with construction noise management levels at sensitive receivers; (i) be above the 20 year ARI flood level unless a contingency plan to manage flooding is prepared and implemented; (j) have minor impacts on flood storage and not result in obstruction of floodplain flow or blockage of culverts and drains; (k) not unreasonably affect the land use of adjacent properties; (i) operate in accordance with the construction hours set out in conditions B15 and B16; (m) provide sufficient area for the storage of material to minimise, to the greatest extent practical, the number of deliveries required outside standard construction hours; and (n) be located in areas of low heritage conservation significance (including areas identified as being of Aboriginal cultural value) and not impact on heritage sites beyond those already impacted by the SSI. The Applicant shall undertake an assessment of the facility against the above criteria in consultation with the relevant public authority(s) and the relevant council. The assessment shall be approved by the Environmental Representative and included i	All	All	Pre-construction Detailed Design	Pacific Complete/Detailed Designers	d Ancillary Facilities are managed in accordance with this MCoA and the approved AFMP as a sub Plan to the approved CEMP's for Section 1.
B74	Ancillary facilities that have not been previously identified and assessed in the documents listed in condition A2, and do not meet the criteria set out under condition B73, shall be approved by the Environmental Representative prior to its establishment. In obtaining this approval, the Applicant shall consult with the relevant public authority(s) and the relevant council, and demonstrate to the satisfaction of the Environmental Representative, how the potential environmental impacts can be mitigated and managed to acceptable standards. The outcomes of the assessment shall be documented in a report and include, but not necessarily be limited to: (a) details on the site location and access arrangements; (b) a description of the activities to be undertaken; (c) outcomes of the assessment of the site against the locational criteria set out in condition B73; (d) an assessment of the environmental impacts on the site and the surrounding environment, including, but not limited to noise, vibration, air quality, traffic and access during site establishment and operation, flora and fauna, heritage, erosion and sedimentation, water quality and light spill; (e) details of the mitigation, monitoring and management procedures specific to the ancillary facility that would be implemented to minimise environmental impacts; and (f) demonstrated overall consistency with the approved SSI (including impacts identified in the documents listed in condition A2). A copy of the report shall be included in the Ancillary Facilities Management Plan.	All	All	Pre-construction	Pacific Complete/ Contractors	Ancillary Facilities are managed in accordance with this MCoA and the approved AFMP as a sub Plan to the approved CEMP's for Section 1.
B75	Notwithstanding condition B74, ancillary facilities that that have not been previously identified and assessed in the documents listed in condition A2 and result in additional impacts to biodiversity, heritage, flooding and noise beyond those approved for the SSI, shall be approved by the Secretary prior to their establishment. In order to obtain this approval, the Applicant shall undertake an assessment of the ancillary facility in accordance with condition B74 and forward a copy of the assessment report to the Secretary, as part of the approval submission, at least one month prior to the establishment of the facility.	All	All	Pre-construction	Pacific Complete/ Contractors	RMS sought approval from the Secretary for the extension of the Hawthorn Close Ancillary facility due to changes to an existing ancillary facility as required under MCoA B77. Also, as the proposal would result in impacts to biodiversity beyond those approved for the SSI. The extension to Hawthorn Close Ancillary Facility was approved by the Secretary.
B76	The land on which ancillary facilities are located shall be rehabilitated to at least their pre-construction condition or better, unless otherwise agreed by the landowner.	All	All	Pre-construction	Pacific Complete/ Contractors	Shall be undertaken following completion of use of the sites in consultation with RMS / Landowner.

Ministers Condition Of Approval	Requirement	Section	Project Stage	Timing	Responsibility	Comment
B77	Where changes are made to the boundary or use of an ancillary facility, including facilities identified in the documents listed in condition A2, the Applicant shall assess the facility against the criteria set out in condition B73. If the ancillary facility site: (a) does not meet the criteria set out under condition B73 the Applicant shall seek the approval of the Environmental Representative in accordance with condition B74; or (b) results in impacts to biodiversity, heritage, flooding and noise beyond those approved for the SSI, the Applicant shall seek the approval of the Secretary in accordance with condition B75. The relevant approval shall be obtained prior to the establishment of the ancillary facility.	All	All	Pre-construction Construction Operation	Pacific Complete/ Contractors	Not applicable to current or proposed Ancillary Facility sites at Section 1.
B78	The Applicant may undertake archaeological investigations at ancillary sites that do not meet the criterion set out in condition B73, where this is required to assess the potential Aboriginal and non-Aboriginal archaeological impacts of the ancillary facility on previously unidentified heritage sites, provided: (a) any archaeological investigations undertaken under this condition shall be consistent with the requirements in condition B44 for Aboriginal heritage and condition B50 for non-Aboriginal heritage and with the Construction Heritage Management Plan or a methodology prepared to the satisfaction of the Secretary in consultation with OEH; and (b) the results of any relevant archaeological investigations undertaken under this condition shall be consistent with the reporting requirements of condition B45 for Aboriginal heritage and condition B50 for non-Aboriginal heritage and be described in the assessment of the ancillary facility required under conditions B74 and B75.	All	All	Pre-construction	Pacific Complete/ Contractors	Not applicable to current or proposed Ancillary Facility sites.
B79	The Applicant shall ensure that material extracted from the borrow sites established for the SSI, is only used for the construction of the SSI subject to this approval, and no other sections of the Pacific Highway or other works.	All	All	Construction	Pacific Complete/ Contractors	Not applicable to Section 1 W2HC
B80	The Applicant shall ensure that all plant and equipment used at the site is: (a) maintained in a proper and efficient condition; and (b) operated in a proper and efficient manner.	All	All	Pre-construction Construction	Pacific Complete/ Contractors	This has been achieved in accordance with commitments within the CNVMP.
B81	The Applicant shall ensure that during the operation of the SSI, water quality risks to the Woodburn Borefield drinking water catchment are minimised to the satisfaction of Rous Water.	8	Stage 2	Detailed Design	RMS Pacific Complete	Stage 2

Condition Of							
Approval							
D1	The Applicant shall develop a framework for finalising mitigation measures for threatened species. This Mitigation Framework shall be developed by a suitably qualified and experienced ecologist in consultation with DPI (Fisheries), OEH and DoE, and submitted to the satisfaction of the Secretary prior to commencement of detailed design of the relevant stage, unless otherwise agreed by the Secretary. The Mitigation Framework shall detail the process for finalising the biodiversity strategies, plans and programs required under this approval. The Mitigation Framework shall include: (a) a description of the methodology of all proposed pre-construction species and habitat surveys, including surveys undertaken in the 2013-2014 spring and summer seasons and as otherwise required under this project approval, and with reference where relevant to compliance with relevant NSW and Commonwealth field survey methods and guidelines; (b) a summary of potential changes to the avoidance, mitigation and/or offset measures specified in the documents listed in condition A2, as justified by the results of surveys described in condition D1(a); (c) a summary of the potential avoidance, mitigation and/or offset measures for all species for which the proposed level of impact or mitigation required differs from that assessed in the documents listed in condition A2, including evidence that those measures would achieve the same or an improved biodiversity outcome; (d) provision for updating the relevant Threatened Species Management Plans required under condition D8; and (e) a schedule for submission of all biodiversity strategies, plans and programs required under this approval in accordance with the requirements for submission in the conditions below.	All	All	Pre-construction	RMS	The Mitigation Framework was approved by the Department of Planning & Environment on the 8/5/15. This document is part of the FFMP.	
D2 (a)-(g)	The Applicant shall prepare and implement a Connectivity Strategy, to be submitted and approved by the Secretary prior to the commencement of construction. The strategy shall describe the rationale for, and final design and location of, fauna connectivity structures for the SSI and shall demonstrate the effectiveness of connectivity measures for the species targeted for the crossing. The Strategy shall be developed from the draft Connectivity Strategy in the documents listed in condition A2 in consultation with the OEH, DPI (Fisheries) and DoE, to the satisfaction of the Secretary. The Strategy shall include: (a) details of all crossings for terrestrial and aquatic fauna, including but not limited to land bridges, bridge, arch and culvert crossings, and crossings for arboreal fauna; (b) justification for the location and design, and spacing of the connectivity structures, with reference to relevant State and Commonwealth threatened species guidelines and the results of onground surveys as required by D2(d); (c) demonstration of the effectiveness of the connectivity structures (including exclusionary fencing) in terms of location, design and number of connectivity structures to mitigate impacts to the relevant threatened species, and that the crossings: (i) maintain or improve connectivity and movement pathways; (ii) reduce the risk of mortality for threatened species; (iii) are located at locations, at sufficient frequency along the alignment, based on the ecological requirements of the targeted species, including but not limited to home range size, movement patterns, and habitat use; (d) the results of surveys undertaken to determine the habitat, species movement patterns, distribution of species to confirm the design and location; (e) consideration of connectivity under the existing highway, service roads and local roads (servicing over 100 vehicles per day); (f) commitment that pathways to connectivity structures are not to be impeded by ancillary facilities, rest areas or service roads, or local ro		All	Pre-construction	RMS	The Connectivity Strategy for Sections 1 & 2 was approved by the Department of Planning & Environment on the 11/5/15. This document forms part of the approved FFMP for Sections 1. Monitoring of connectivity structures will be occurring as per the specific Threatened Species Management Plans.	
D2 (h)-(m)	(h) a fencing strategy, describing the location, design and length of fencing, which must extend beyond the edges of habitat for threatened species; (i) the maintenance of connectivity measures and fencing for the life of the impact of the action, including the timing and frequency; (i) an assessment of the flooding risk for proposed structures, and measures to confirm and provide for flood immunity of those structures in light of this assessment. The agreement of the OEH on flood immunity levels shall be obtained prior to the commencement of construction of the relevant stage; (k) commitment that all bridges in identified wildlife corridors, or adjacent to threatened species habitat, or are likely to provide connectivity for threatened species based on surveys undertaken in accordance with the Mitigation Framework required in condition D1, shall provide a minimum three metre wide dry passage from toe of the scour protection to the top of the bank, with natural substrate and refuge features. Where this criteria cannot be achieved and with the agreement of the OEH, consideration shall be given to the use of suitable materials in, and the final form of, the scour protection to provide for the safe and effective passage of fauna; (f) detailed consideration of the effects of connectivity structures on the maintenance or improvement of population viability and gene flow; and (m) incorporate the outcomes of the Mitigation Framework required under condition D1. Unless connectivity measures can be demonstrated to be effective at successfully mitigating the barrier and fragmentation impact to relevant species, in accordance with the requirements of the construction flora and fauna management plan required under condition D26(e), and threatened species management plans required under conditions D8 and D9, the residual impact to connectivity shall be offset. Where the location and/or design of connectivity structures has changed from that identified in the documents listed under conditions A2(c) and A2(e), the Strategy	All	All	Pre-construction	RMS	The Connectivity Strategy for Sections 1 and 2 was approved by the Department of Planning & Environment on the 11/5/15. This document is part of the FFMP and requirements as per this approved plan are being addressed during the construction phase.	
D3	The Applicant shall prepare and implement a Biodiversity Offset Strategy to outline how the ecological values lost as a result of the SSI will be offset in perpetuity. The Strategy shall be developed from the draft Biodiversity Offset Strategy in the documents listed in condition A2, in consultation with the OEH, DPI (Fisheries) and DoE, to the satisfaction of the Secretary. Unless otherwise agreed to by the OEH, DPI (Fisheries) and DoE, offsets shall be provided on a like-for-like basis and at a minimum ratio of 4:1 for native vegetation (including salt marsh) impacted by the SSI or as required by the Environment Protection and Biodiversity Conservation Act 1999 Environmental Offsets Policy (Commonwealth of Australia 2012) and Offsets Assessment Guide (Commonwealth of Australia 2012), whichever is the greater. The Strategy shall include, but not necessarily be limited to: (a) the objectives and outcomes that would be sought through a biodiversity offset package, including to achieve a neutral or net beneficial outcome for all threatened species and endangered ecological communities likely to be impacted directly or indirectly during both the construction and operation of the SSI; (b) confirmation of the vegetation typerhabitat (in hectares) to be cleared and their condition, and the size of offsets required (in hectares); (c) details of the available offset measures that have been selected to compensate for the loss of existing native vegetation (including mangroves, salt marsh and riparian vegetation), threatened and vulnerable species and Endangered Ecological Communities and their habitats, and identification of potential offset sites; (d) consideration of contingency measures for offsets to address potential changes to impacted areas a result of detailed design changes; (e) a process for addressing and incorporating offset measures arising from changes in biodiversity impacts (where these changes are generally consistent with the biodiversity impacts identified for the SSI in documents listed under condit		All	Pre-construction and Construction	RMS	Department of Planning and Environment and Department of the Environment approved a variation for the submission of the Biodiversity Offset Strategy and Offset Status Report within 3 months of commencement of sections 1 and 2 and approval of the Biodiversity Offset Strategy and Offset Status Report prior to commencement of Stage 2 works. The Biodiversity Offset Strategy and Offset Status Report (D4) were both submitted as per the variation timeline. The Biodiversity Offset Strategy was approved by the Department of Planning & Environment on the 6/1/16 The Biodiversity Offset Strategy was approved by the Department of the Environment on the 7/1/16

D4	Prior to the commencement of construction work that would result in the disturbance of the relevant existing ecological communities, threatened species, or their habitat, unless otherwise agreed by the Secretary, the Applicant shall submit for the approval of the Secretary, the offset sites for the species listed under condition D4(a). The selection of the offset sites should be undertaken in consultation with the OEH, DPI (Fisheries) and DoE. Submission of the offset sites for approval shall be accompanied by: (a) details of offset sites to compensate the impacts on: (i) Koala populations in Coolgardie/Bagotville, Broadwater and Woombah/Iluka; (ii) Moonee Quassia (Quassia sp. Moonee Creek); (iii) Sandstone Rough–Barked Apple (Angophora robur); (iv) Singleton Mint Bush (Prostanthera cineolifera); and (v) Lowland Rainforest in Sub-tropical Australia; (b) a map that defines the locations and boundaries of the sites; (c) demonstration, through ground truthing survey or an alternative method(s), the adequacy of the site(s), in terms of habitat suitability and presence of the relevant species, to offset the impacts of the SSI; (d) consideration of how the offsets achieve the outcomes required by the Environment Protection and Biodiversity Conservation Act 1999 Environmental Offsets Policy to the satisfaction of DoE; and (e) details of how the offset sites would be secured and managed in perpetuity.	1,2, 3, 4, 6, 9,10,11	All	Pre-construction and Construction	RMS	Department of Planning and Environment and Department of the Environment approved a variation for the submission of the Biodiversity Offset Status Report within 3 months of commencement of sections 1 and 2 and approval of the Biodiversity Offset Status Report prior to commencement of Stage 2 works. The Biodiversity Offset Status Report (D4) was submitted as per the variation timeline. Update 2 (covering Sections 1 and 2 and early stage works) was approved in January 2016 with the Biodiversity Offset Strategy. Update 3, to cover all other sections, was approved by the Department of Planning and Environment on 30/6/16 and the Department of the Environment and Energy on 18/716. In June 2017 an addendum to the Biodiversity Offset Status Report was developed to add a new site for the Broadwater koala population. This was approved by the Department of Planning and Environment on 19/6/17 and the Department of the Environment and Energy on 13/7/17.
D5 (a)-(g)	The Applicant shall prepare and implement (following approval) a Biodiversity Offset Package, within twenty-four months of approval of the Biodiversity Offset Strategy, or as otherwise agreed by the Secretary. The package shall detail how the ecological values lost as a result of the SSI will be offset. The Biodiversity Offset Package shall be prepared in consultation with the OEH, DPI (Fisheries) and DoE, for the approval of the Secretary, and shall (unless otherwise agreed by the Secretary) include, but not necessarily be limited to: (a) the identification of the extent and types of habitat that would be lost or degraded as a result of the final design of the SSI; (b) the objectives and biodiversity outcomes to be achieved; (c) details of the final suite of the biodiversity offset measures selected and secured in accordance with the Biodiversity Offset Strategy including the identification of all offset sites, including, offset attributes, shapefiles, textual descriptions and maps that clearly define the location, boundaries of the offset areas; (d) an assessment demonstrating how the offset area(s) achieve the outcomes required by the Environment Protection and Biodiversity Conservation Act 1999 Environmental Offsets Policy and user guide to the written satisfaction of DoE; (e) the management and monitoring requirements for compensatory habitat works and other biodiversity offset measures proposed to ensure the outcomes of the package are achieved, including; (i) the monitoring of the condition of species and ecological communities at offset locations; (ii) the methodology for the monitoring program(s), including the number and location of offset monitoring sites, and the sampling frequency at these sites; (iii) provisions for the annual reporting of the monitoring results for a set period of time as determined in consultation with the OEH, DPI (Fisheries) and DoE; and (iv) the monitoring and reporting on the effectiveness of these measures, and progress against the performance and completion criter	d All	All	Pre-construction and Construction	RMS	The Department of Planning & Environment approved an extension of time for the Biodiversity Offset Strategy until 3 months after the start of construction. The Biodiversity Offset Strategy was approved by the Department of Planning & Environment on the 6/1/16 The Biodiversity Offset Strategy was approved by the Department of the Environment the 7/1/16 RMS will prepare and implement (following approval) a Biodiversity Offset Package, within twenty-four months of approval of the Biodiversity Offset Strategy, or as otherwise agreed by the Secretary.
D5(h)-(m)	(h) targeted management actions, regeneration and/or revegetation strategies to be undertaken on the offset area(s) to improve the ecological quality of these areas for the relevant species and communities; (i) clear performance objectives for management actions that will enable maintenance and enhancement of habitat within the offset area, as well as contribute to the better protection of individuals and/or populations of the relevant species; (ii) performance and completion criteria for evaluating the management of the offset area, including contingency actions, criteria for triggering contingency actions and a commitment to the implementation of these actions in the event that performance objectives are not met; a program to monitor and report on the effectiveness of these measures, and progress against the performance and completion criteria; (k) timing and responsibilities for the implementation of the provisions of the Biodiversity Offset Package and achieving performance objectives; (i) details of who would be responsible for monitoring, reviewing, and implementing the Biodiversity Offset Package; and (m) a description of funding arrangements or agreements including work programs and responsible entities. Land offsets shall be consistent with the Principles for the use of Biodiversity Offsets in NSW. Any land offset shall be enduring and be secured by a conservation mechanism which protects and manages the land in perpetuity. Where land offsets cannot solely achieve compensation for the loss of habitat, additional measures shall be provided to collectively deliver an improved o maintained biodiversity outcome for the region. The Biodiversity Offset Package shall include details of the offset sites approved under condition D4, and timeframe for the delivery of the offset sites. Where monitoring required under conditions D8 and/or D9 indicates that biodiversity outcomes are not being achieved, remedial actions. as approved by the Secretary, shall be undertaken to ensure that the objectives of the Biodiv		All	Pre-construction and Construction	RMS	Department of Planning and Environment and Department of the Environment approved a variation for the submission of the Biodiversity Offset Strategy and Offset Status Report within 3 months of commencement of sections 1 and 2 and approval of the Biodiversity Offset Strategy and Offset Status Report prior to commencement of Stage 2 works. The Biodiversity Offset Strategy and Offset Status Report (D4) were both submitted as per the variation timeline. The Biodiversity Offset Strategy was approved by the Department of Planning & Environment on the 6/1/16 The Biodiversity Offset Strategy was approved by the Department of the Environment the 7/1/16 RMS will prepare and implement (following approval) a Biodiversity Offset Package, within twenty-four months of approval of the Biodiversity Offset Strategy, or as otherwise agreed by the Secretary.
D6	Prior to the commencement of construction of the relevant stage that would result in the disturbance of native vegetation (or as otherwise agreed by the Secretary), the Applicant shall prepare and implement a Nest Box Plan to provide replacement hollows for displaced fauna. The Plan shall be prepared in consultation with the OEH and to the satisfaction of the Secretary. The Plan shall be prepared by a suitably qualified and experienced ecologist and detail the number and type of nest boxes to be installed, which shall be justified based on the number and type of hollows removed (based on pre clearing surveys), the density of hollows in the area to be cleared and in adjacent areas, and the availability of adjacent food resources. The Plan shall also provide details of maintenance protocols for the nest boxes installed including responsibilities, timing and duration.		All	Pre-construction and Construction	RMS and Contracto	The Nest Box Plan for Stage 1 W2B was approved by the Department of Planning & Environment on the 17/2/15. This document is part of the FFMP. 70 % of the required nest boxes on Sections 1 & 2 were installed pre construction & the remaining 30% nest boxes as per the Nest Box Plan have been installed.
D7	The Applicant shall prepare and implement a Flora Translocation Strategy to determine the feasibility and potential efficacy of translocation measures (as identified in the threatened species management plans required under condition D8), prior to the commencement of construction work that would result in the disturbance of threatened flora species for which translocation is proposed. The Strategy shall be prepared by a suitably qualified and experienced ecologist, in consultation with the OEH and DoE, and to the satisfaction of the Secretary. The Strategy shall include: (a) a feasibility assessment of timeframe and staging requirements, availability of expertise, risk effectiveness analysis and availability/suitability of translocation sites; (b) detail of species specific information on the proposed methods of, and discussion of results of past recorded responses to, translocations; (c) a framework for the translocation process applicable to each affected species; and (d) consideration of appropriate compensatory habitat in the Biodiversity Offsets Package required under condition D5 where translocation is not reasonable or feasible.	Ali	All	Pre-construction	RMS	The Flora Translocation Strategy for Sections 1 & 2 was approved by the Department of Planning & Environment on the 12/5/15 . This document is part of the FFMP. In addition to the requirements of the TFlora Management Plan, a number of a non threatened species Lepidopsperma were collected from the southern side of Wells Crossing and these are growing in a north coast nursery. Threatened flora has been translocated or in nurseries for translocation, for Sections 1 and 2. Insitu and translocated flora are being monitored in accordance with the TFlora MPLan.

D9 (e)-(i)	(e) if the mitigation measures discussed in condition D9(d) cannot be demonstrated to be effective to the satisfaction of the Secretary, in consultation with OEH and DoE, provision for the Plai to be revised to include the design and construction of a minimum of one dedicated underpass or land bridge every 500 metres. Underpass structures shall have a minimum height and width of three metres and a maximum length of 50 metres. (f) provision for the installation and vegetation planting of fauna overpasses prior to the commencement of construction; (g) a revegetation strategy to be implemented to increase connectivity adjacent to the SSI and leading to crossing locations, and the provision of vegetation planting on land bridges, to ensure the establishment of the vegetation prior to the commencement of construction; (h) details of the proposed monitoring methodology to ensure the effectiveness of the mitigation measures and the ongoing survival of the Coolgardie/Bagotville, Broadwater and Woombah/Illuka Koala populations. Monitoring shall: (i) include goals that demonstrate the mitigation measures are effective, including clear objectives, milestones, performance measures, corrective actions, and thresholds for corrective actions, and thresholds for corrective actions, and thresholds for corrective actions and thresholds that demonstrate the mitigation measures are demonstrated to be effective for three consecutive monitoring periods, or as agreed by the Secretary, to the satisfaction of the independent ecologist and OEH; and OEH; and (iii) for the purposes of the Coolgardie/Bagotville population, consider the results of the surveys undertaken in the Koala habitat and population assessment: Ballina Shire Council LGA (iii) for the purposes of the Coolgardie/Bagotville population, consider the results of the surveys undertaken in the Koala habitat and population assessment: Ballina Shire Council LGA (iii) for the purposes of the Coolgardie/Bagotville population, consider the results of monitoring undertaken in	3	Stage 2	RMS	NA
D9 (j)-(k)	(i) if the measures in condition D9(i) cannot be demonstrated to be successful within one year of their implementation, procedure for the submission of further offsets in accordance with conditions D5 and D6(j), to be provided within one year of these findings. Further offsets may include: (i) the legal protection and conservation management of additional areas of existing habitat that actively regenerated and secured into conservation management; and/or (ii) strategic revegetation of cleared areas to improve connectivity; and/or (iii) development of a supplementary feeding program and/or breeding program; and/or (iv) development of a long term predator control program; and (k) evidence of consultation with species experts, OEH and DoE in addressing the requirements of this condition, and demonstration of how comments provided by the species experts, OEH and DoE, as a result of this consultation, have been addressed. The Koala Management Plan shall be submitted and approved by the Secretary prior to the commencement of construction of the relevant stages of the SSI. The approved Koala Management Plan shall be implemented prior to the commencement of construction of the relevant stages.	6,9,10	Stage 2	Pre-construction RMS	Stage 2
D10	Prior to the commencement of construction, the Applicant shall undertake a land use survey to identify areas that are sensitive to construction vibration and construction ground-borne noise impacts. The results of the survey shall be incorporated into the Construction Noise and Vibration Management Plan.	All	All	Pre-construction and Contractor Construction	A survey has been undertaken for Sections 1 & 2 to identify areas that are sensitive to construction vibration and construction ground-borne noise impacts. The results of these survey have be incorporated into the Construction Noise and Vibration Management Plans for Sections 1 & 2.
D11	The Applicant shall prepare a review of the operational noise mitigation measures proposed to be implemented for the SSI, within six months of commencing construction, unless otherwise agreed by the Secretary. The review shall be prepared in consultation with the EPA, to the satisfaction of the Secretary. The review may be submitted in stages to suit the staged construction of the SSI and shall: (a) confirm the operational noise predictions of the SSI based on detailed design. This operational noise assessment shall be based on an appropriately calibrated noise model (which has incorporated additional noise monitoring, where necessary for calibration purposes); (b) review the suitability of the operational noise mitigation measures identified in the documents listed in condition A2. The review shall take into account the detailed design of the SSI and, where feasible and reasonable, and where necessary, refine the proposed measures with the objective of meeting the criteria outlined in the NSW Road Noise Policy (Department of Environment, Climate Change and Water, 2011), based on the operational noise mitigation measures to achieve the criteria outlined in the NSW Road Noise Policy (DECCW, 2011).	All	All	Pre-construction and Construction RMS	The Operation Noise Management Report (ONMR) was approved by the Secretary on the 2nd June 2015. Low noise pavement has been designed for the first 1.8km of section 1 as required by the ONMR. Changes due to detailed design has seen 17 previously identified houses within the EIS no longer requiring treatment, and 5 others now eligible. The total to receive treatment is 41 residences. RMS has engaged a consultant to scope the 'At House Noise Treatment' for each property identified in the Operational Noise Management Report (ONMR). Acoustic treatments to properties are ongoing until completion of all identified residences in the ONMR.
D12	The Applicant shall prepare and implement a Water Quality Monitoring Program, to monitor the construction and operation impacts of the SSI on surface and groundwater quality and resources and wetlands, prior to construction. The Program shall be prepared in consultation with the OEH, EPA, DPI (Fisheries), NOW, DoE and Rous Water (in relation to the Woodburn borefields), to the satisfaction of the Secretary, and shall include but not necessarily be limited to: (a) identification of surface and groundwater quality monitoring locations (including watercourses, waterbodies and SEPP14 wetlands) which are representative of the potential extent of impacts from the SSI; (b) the results of any groundwater modelling undertaken; (c) identification of works and activities during construction and operation of the SSI, including emergencies and spill events, that have the potential to impact on surface water quality of potentially affected waterways and known Oxleyan Pygmy Perch habitat; (d) development and presentation of parameters and standards against which any changes to water quality will be assessed, having regard to the Australian and New Zealand Guidelines for Fresh and Marine Water Quality 2000 (Australian and New Zealand Environment Conservation Council, 2000) or relevant baseline data; (e) representative background monitoring of surface and groundwater quality parameters for a minimum of twelve months (considering seasonality) prior to the commencement of construction, to establish baseline water conditions, unless otherwise agreed by the Secretary; (f) a minimum monitoring period of three years following the completion of construction or until the affected waterways and/or groundwater resources are certified by an independent expert as being rehabilitated to an acceptable condition. The monitoring shall also confirm the establishment of operational water control measures (such as sedimentation basins and vegetation swales); (g) contingency and ameliorative measures in the event that adverse impacts to water qual		All	Pre-construction, Construction and Operation	The Water Quality Monitoring Program for Sections 1 & 2 was approved by the Department of Planning & Environment on the 8/5/15. Contractors for Section 1 & 2 are undertaking surface water quality monitoring in accordance with the approved program. RMS is continuing to monitor groundwater levels and water quality during Construction. Annual water quality monitoring reports are being developed in accordance with the approved Water Quality Monitoring Program.

Ministers Condition Of Approval	Requirement	Section	Project Stage	Timing	Responsibility	Comment
D13	The Applicant shall prepare and implement a Hydrological Mitigation Report for properties where flooding and/or hydrological impacts are predicted to exceed the relevant flood management objective in the documents listed in condition A2 as a result of the SSI. The Report shall be prepared by a suitably qualified expert and be based on detailed surveys (e.g. floor levels) and associated assessment of potentially flood affected properties in the Corindi, Clarence and Richmond river floodplains. The Report shall: (a) identify properties in those areas likely to have an increased/exacerbated impact and detail the predicted impact; The types of impacts to be considered include all those examined in the EIS including but not limited to changes in flood levels and velocities, alteration to drainage, reduction in flood evacuation access or capability, impacts on infrastructure, impacts on stock and agriculture, and impacts to the environment; (b) identify mitigation measures to be implemented to address these impacts; (c) identify measures to be implemented to minimise scour and dissipate energy at locations where flood velocities are predicted to increase as a result of the SSI and cause localised soil erosion and/or pasture damage; (d) be developed in consultation with the relevant council, NSW State Emergency Service and directly-affected landowners; (e) identify operational and maintenance responsibilities for items (a) to (c) inclusive; and (f) refer to the assessments described in conditions B31 and B32. The report may be submitted in stages to suit the staged construction of the SSI. Construction shall not commence within those areas likely to have altered flood conditions until such time as works identified in the hydrological mitigation report have been completed, unless otherwise agreed by the Secretary.		All	Pre-construction	RMS	The Hydrological Mitigation Report for Corindi was submitted for approval to DP&E on 1/05/15 and approved by the Secretary on the 4/6/17. Although soft soil works are located in the Clarence and Richmond river floodplains, flood modelling conducted during the detailed design indicates that hydrological impacts due to the construction of embankments in these areas are not predicted to exceed the relevant flood management objective.
D14	Based on the mitigation measures identified in condition D13, the Applicant shall prepare and implement a final schedule of feasible and reasonable flood mitigation measures proposed at each directly-affected property in consultation with the landowner. The schedule shall be provided to the relevant landowner(s) prior to the implementation/construction of the mitigation works, unless otherwise agreed by the Secretary. A copy of each schedule of flood mitigation measures shall be provided to the Department of Planning and Environment and the relevant council prior to the implementation/construction of the mitigation measures on the property.	All	All	Pre-construction	RMS	The Hydrological Mitigation Report for Corindi was submitted for approval to DP&E on 1/05/15 and approved by the Secretary on the 4/6/17. As outlined in the report, RMS is undertaking community consultation on the Blackadder Safety works mitigation. This work is proposed to be undertaken following the upgrade of Section 1.
D15	The Applicant shall employ a suitably qualified and experienced independent hydrological expert, whose appointment has been endorsed by the Secretary, to deal with all hydrological matters and assist landowners in negotiating feasible and reasonable mitigation measures.	S All	All	Pre-construction	RMS	WMAWater Pty Ltd has been appointed as Independent Hydrological Expert for the Woolgoolga to Ballina Project to comply the requirements of Condition D15 on 30 April 2015.
D16	The Applicant shall provide feasible and reasonable assistance to the relevant council and/or NSW State Emergency Service, to prepare any new or necessary update(s) to the relevant plant and documents in relation to flooding, to reflect changes in flooding levels, flows and characteristics as a result of the SSI.	S All	All	Pre-construction	RMS	Noted, and will be undertaken as required. For Corindi, ongoing consultation will occur regarding the Blackadder Ck safety works. Coffs Harbour City Council, in collaboration with the SES, are installing 2 flood gauges on the Corindi Ck system.
D17	The Applicant shall prepare and implement a Signage Policy to addresses the impact of towns (South Grafton, Ulmarra, Tyndale, Woodburn, Broadwater and Wardell) which are bypassed by the SSI, at least six months prior to operation, unless otherwise agreed by the Secretary. The Policy shall be prepared in consultation with the relevant council and to the satisfaction of the Secretary. The Policy shall be consistent with the Guide: Signposting (RTA July 2007), Tourist Signposting guide (RMS and Destination NSW 2012) and provide for signage that: (a) provides information on the range of services available within the bypassed towns of South Grafton. Ulmarra, Tyndale, Woodburn, Broadwater and Wardell; and (b) informs motorists of routes through the bypassed towns that may be taken as an alternative to the highway. The Policy may be submitted in stages to suit the staged construction of the SSI.	3, 8, 9, 10	Stage 2	Pre-construction	RMS	Stage 2
D18	The Applicant shall prepare and implement a Business Access Strategy to address changes to access to businesses along the highway, at least six months prior to operation. The Strategy shall be prepared in consultation with the relevant council, business owners and the New Italy Museum and to the satisfaction of the Secretary. Note The Applicant may incorporate the requirements of this condition into the Signage Policy for the SSI under condition D17.	All	All	Construction	RMS	Consultation with relevant businesses has been undertaken and strategies implemented following consultation to address changes to access.
D19	Upon determining the haulage route(s) for construction vehicles associated with the SSI, and prior to construction, an independent and qualified expert shall prepare a Road Dilapidation Report. The Report shall assess the current condition of the road and describe mechanisms to restore any damage that may result due to its use by traffic and transport related to the construction of the SSI. The Report shall be submitted to the relevant council for review prior to the commencement of haulage. Following completion of construction, a subsequent Report shall be prepared to assess any damage to the road that may have resulted from the construction of the SSI. Measures undertaken to restore or reinstate roads affected by the SSI shall be undertaken in a timely manner, in accordance with the reasonable requirements of the relevant council, and at the full expense of the Applicant. Note: Nothing in this condition restricts the Applicant commencing adjustments and minor upgrades to the existing road network to cater for construction traffic and installation of temporary project signage prior to the commencement of construction.	All	All	Pre-construction and Construction	Contractor	In accordance with RMS Specification G10, each contractor is required to undertake this survey prior to commencing works on the site. All road dilapidation surveys for the local roads around Section 1 & the Pacific Highway [in the area of Section 1] have been completed. The road dilapidation report for Section 2 has been completed by CMC and forwarded to RMS and Council.
D20 (a)-(d)	The Applicant shall prepare and implement an Urban Design and Landscape Plan prior to the commencement of permanent built works and/or landscaping, unless otherwise agreed by the Secretary, to present an integrated landscape and design for the SSI. The Plan shall be prepared in accordance with the Roads and Maritime Services urban design and visual guidelines, the design principles outlined in the EIS, and the revegetation principles outlined in the EIS working Paper—Biodiversity. The Plan shall be prepared by an appropriately qualified expert in consultation with the relevant council and community, to the satisfaction of the Secretary. The Plan shall include, but not necessarily be limited to: (a) identification of design principles and standards based on: (i) local environmental values, (ii) heritage values; (iii) urban design context; (iv) sustainable design and maintenance; (v) community amenity and privacy; (vi) relevant design standards and guidelines; and (vii) the urban design objectives outlined in Section 4.2 of the EIS Working Paper—Urban Design Landscape Character and Visual Impact; (b) the location of existing vegetation and proposed landscaping (including use of indigenous and endemic species where possible). Details of species to be replanted/revegetated shall be provided, including their appropriateness to the area and habitat for threatened species; (c) a description of locations along the corridor directly or indirectly impacted by the construction of the SSI (e.g. temporary ancillary facilities, access tracks, watercourse crossings, etc.) and details of the strategies to progressively rehabilitate regenerate and/or revegetate the locations with the objective of promoting biodiversity outcomes and visual integration; (d) take into account appropriate roadside plantings and landscaping in the vicinity of heritage items and ensure no additional heritage impacts;		All	Pre-construction and Construction	RMS and Contract	or For sections 1 & 2, an Urban Design and Landscape Plan that addresses this condition has been submitted and approved by the Department of Planning & Environment on the 8/5/15.
D20 (e)-(k)	(e) a description of disturbed areas (including borrow sites) and details of the strategies to progressively rehabilitate, regenerate and/or revegetate these areas, including clear objectives and timeframes for rehabilitation works, procedures for monitoring success of regeneration or revegetation, and corrective actions should regeneration or revegetation not conform to the objectives adopted; (f) location and design treatments for any associated footpaths and cyclist elements, and other features such as seating, lighting (in accordance with AS 4282-1997 Control of the Obtrusive Effect of Outdoor Lighting), fencing, materials and signs; (g) an assessment of the visual screening effects of existing vegetation and the proposed landscaping and built elements. Where properties have been identified as likely to experience high visual impact as a result of the SSI and high residual impacts are likely to remain, the Applicant shall, in consultation with affected landowners, identify opportunities for providing at-property landscaping to further screen views of the SSI. Where agreed with the landowner, these measures shall be implemented during the construction of the SSI; (h) graphics such as sections, perspective views and sketches for key elements of the SSI, including, but not limited to built elements of the SSI; (i) strategies for progressive landscaping and other environmental controls such as erosion and sedimentation controls, drainage and noise mitigation; (j) monitoring and maintenance procedures for the built elements, rehabilitated vegetation and landscaping (including weed control). including performance indicators, responsibilities, timing and duration and contingencies where rehabilitation of vegetation and landscaping measures fail; and (k) evidence of consultation with the relevant council and community on the proposed urban design and landscape measures prior to its finalisation. The Plan may be submitted in stages to suit the staged construction program of the SSI.	All	All	Pre-construction and Construction	RMS and Contract	For sections 1 & 2, An Urban Design and Landscape Plan that addresses this condition has been submitted and approved by the Department of Planning & Environment on the 8/5/15

Approval						
D27	The Applicant shall prepare and implement a Compliance Tracking Program, to track compliance with the requirements of this approval, prior to the commencement of construction and operate from the date of its approval to a minimum of one year following commencement of operation, or as otherwise agreed by the Secretary. The Program shall be prepared for the approval of the Secretary, and include, but not necessarily be limited to: (a) provisions for the notification of the Secretary prior to the commencement of construction and prior to the commencement of operation of the SSI (including prior to each stage, where works are being staged); (b) provisions for periodic review of the compliance status of the SSI against the requirements of this approval; (c) provisions for periodic reporting of compliance status to the Secretary, including a Pre-Construction Compliance Report, prior to the commencement of construction, and a Pre-Operation Compliance Report prior to the commencement of operation. These reports may be staged to suit the staged construction/operation of the SSI; (d) a program for independent environmental auditing in accordance with ISO 19011:2003 - Guidelines for Quality and/or Environmental Management Systems Auditing; (e) mechanisms for recording environmental incidents during construction and actions taken in response to those incidents; (f) provisions for reporting environmental incidents to the Secretary and relevant public authorities during construction; (g) procedures for rectifying any non-compliance identified during environmental auditing, review of compliance or incident management; and (h) provisions for ensuring all employees, contractors and sub-contractors are aware of, and comply with, the conditions of this approval relevant to their respective activities.	All	All	Pre-construction and Construction	RMS and Contractor	The Compliance Tracking Program for Stage 1 was approved by the Department of Planning & Environment on the 7/5/15. The previsions for periodic reporting including a pre-construction compliance report is being met with this document with 6 monthly reports being provided to the Department of Planning and Environment in accordance with the approved Compliance Tracking Program. The Section 1 pre construction compliance tracking report was submitted on 5 June 2015. This is the 4th 6 monthly Compliance Tracking Report for W2HC.
D28	The Applicant shall undertake operational noise monitoring, to compare actual noise performance of the SSI against noise performance predicted in the review of noise mitigation measures required by condition D11, within 12 months of the commencement of operation of the SSI, or as otherwise agreed by the Secretary. The Applicant shall subsequently prepare an Operational Noise Compliance Report to document this monitoring. The Report shall include, but not necessarily be limited to: (a) noise monitoring to assess compliance with the operational noise levels predicted in the review of operational noise mitigation measures required under condition D11 and documents listed in condition A2; (b) a review of the operational noise levels in terms of criteria and noise goals established in the NSW Road Noise Policy 2011; (c) methodology, location and frequency of noise monitoring undertaken, including monitoring sites at which SSI noise levels are ascertained, with specific reference to locations indicative of impacts on sensitive receivers; (d) details of any complaints and enquiries received in relation to operational noise generated by the SSI between the date of commencement of operation and the date the report was prepared; (e) any required recalibrations of the noise model taking into consideration factors such as noise monitoring and actual traffic numbers and proportions; (f) an assessment of the performance and effectiveness of applied noise mitigation measures together with a review and if necessary, reassessment of feasible and reasonable mitigation measures; and (g) identification of additional feasible and reasonable measures to those identified in the review of noise mitigation measures required by condition D11, that would be implemented with the objective of meeting the criteria outlined in the NSW Road Noise Policy 2011, when these measures would be implemented and how their effectiveness would be measured and reported to the Secretary and the EPA. The Applicant shall provide the Secretary and the EPA	All	All	Operation	RMS	Noted for Sections 1 & 2.
D29	The audit may be staged to suit the staged operation of the SSI. Prior to the commencement of operation, the Applicant shall incorporate the SSI into existing environmental management systems administered by the Applicant and prepared in accordance with the AS/NZS ISO 14000 Environmental Management System series. If there is an inconsistency between the existing environmental management systems and the conditions of this SSI approval, the requirements of this SSI approval shall prevail.	All	All	Construction and Operation	RMS	Noted for Sections 1 & 2
D30	Within 12 months of the commencement of operation, and then as required by the Secretary, the Applicant shall commission and pay the full cost of an Independent Environmental Audit of the SSI. This audit shall: (a) be conducted by a suitably qualified, experienced and independent team of experts whose appointment has been endorsed by the Secretary; (b) include consultation with the relevant agencies; (c) assess the environmental performance of the SSI and assess whether it is complying with the requirements in this approval, and any other relevant approvals (including any assessment, plan or program required under these approvals); (d) review the adequacy of any approved strategy, plan or program required under the abovementioned approvals; and (e) recommend measures or actions to improve the environmental performance of the SSI, and/or any strategy, plan or program required under these approvals. Note: * This audit team shall be led by a suitably qualified auditor, and include experts in biodiversity, noise and vibration, hydrology and any other fields specified by the Secretary. * The audit may be staged to suit the staged operation of the SSI.	All	All	Operation	RMS	Noted for Sections 1 and 2
D31	Within 60 days of commissioning this audit, or as otherwise agreed by the Secretary, the Applicant shall submit a copy of the audit report to the Secretary and relevant public authorities, together with its response to any recommendations contained in the audit report.	All	All	Operation	RMS	Noted for Sections 1 and 2

COMPLIANCE TRACKING - Arrawarra Rest Area

					GOVERNMENT SERVICES
Part	Requirement	Section	Timing	Responsibility	Comment
1.1	The Proponent shall carry out the project generally in accordance with the: a) Major Projects Application 06_0293; b) Coffs Harbour Highway Planning – Sapphire to Woolgoolga section - Environmental Assessment (volumes 1, 2 and 3), prepared by Connell Wagner Pty Ltd and dated November 2007; c) Coffs Harbour Highway Planning – Sapphire to Woolgoolga section – Environmental Assessment Submissions Report, prepared by Connell Wagner Pty Ltd and dated June 2008, including the revised Statement	1	Pre-construction and Construction	RMS and Contractor	Mod 6 relates to the Arrawarra Rest Area. All other conditions primarily relate to the Sapphire to Woolgoolga (S2W) project generally. Each condition relevant to the rest area is listed below.
	of Commitments contained therein; d) correspondence from the NSW Roads and Traffic Authority to the Department of Planning dated 29 October 2008 withdrawing the proposed Arrawarra Rest Area from the project; e) Modification Application dated 21 October 2009 (06_0293 MOD 1) and request for modification dated 20 October 2009; and f) Modification Application dated 22 January 2010 (06_0293 MOD 2), and request for modification dated 22 January 2010; g) Modification Application dated 15 July 2010 (06_0293 MOD 3), including correspondence from the RTA to the Department dated 29 August 2010; h) Modification Application dated 21 September 2010 (06_0293 MOD 4) and request for modification dated 22 September 2010; i) Modification Application and request for modification dated 23 November 2010 (06_0293 MOD 5); i) Modification Application and request for modification received by the department on 21 October 2011 and Response to Submissions dated 3 July 2012 (06_0293 MOD 6); and				Where conditions are relevant to the construction phase, they are included in G36.3.1.
	k) the conditions of this approval.				
1.9	The Proponent is permitted to establish and operate a rest area for light and heavy vehicles at Arrawarra, as generally described in the documents referred to under condition 1.1 (j) of this approval.	1	Pre-construction, Construction and Operation	RMS	A consistency review of the current rest area design was undertaken and approved. The design is in accordance with these conditions.
1.10	The potential future service centre does not form part of this approval and shall be subject to a separate approval process.	1	Operation	RMS	Noted.
2.17	Standard construction hours for the duration of construction are: a) 7:00am to 6:00pm Mondays to Fridays, inclusive; and b) 8:00am to 1:00pm Saturdays; and c) at no time on Sundays or Public Holidays. The following exceptions (without further approval) to standard construction hours apply: i. any works that do not cause construction noise to be audible at any sensitive receiver; or ii. for delivery of materials required outside these hours by the Police or other relevant authorities for safety reasons; or iii. where it is required in an emergency to avoid the loss of lives, property and/or to prevent environmental harm.	1	Construction	Contractor	Where conditions are relevant to the construction phase, they are included in G36.3.1. The Woolgoolga to Halfway Ck CEMP, and in particular the Noise and Vibration Management Plan addresses these working hour constraints. These hours have been adhered to by OHLY.
2.18	Certain construction activities (Out of Hours Works) may be allowed to occur outside the standard construction hours with the prior written approval of the Director-General. Requests for out of hours approval will be considered for construction activities which cannot be undertaken during standard construction hours for technical or other justifiable reasons and will be considered on a case by case or activity-specific basis. Any request for Out of Hours Works must be accompanied by: a) details of the nature and need for activities to be conducted during the varied construction hours; b) written evidence to the EPA and the Director-General that activities undertaken during the varied construction hours are justified, appropriate consultation with potentially affected receivers and notification of Council has been undertaken, issues raised have been addressed, and all feasible and reasonable mitigation measures have been put in place; and c) evidence of consultation with the EPA on the proposed variation in standard construction hours.		Construction	Contractor	Where conditions are relevant to the construction phase, they are included in G36.3.1. The Woolgoolga to Halfway Ck CEMP, and in particular the Noise and Vibration Management Plan addresses these working hour constraints.
2.21	Despite the above, Out of Hours Works may also occur where a process for considering the above on a case by case or activity specific basis by the Proponent, including factors a) to c) above, has been approved as part of a Construction Environment Management Plan or Construction Noise and Vibration Management Plan for this project. The construction noise objective for the project is to manage noise from construction (as measured by a LA10 (15minute) descriptor) so that it does not exceed the background LA90 noise level by: a) more than 20 dB(A) for a construction period of equal to or less than four weeks;	1	Construction	Contractor	Where conditions are relevant to the construction phase, they are included in G36.3.1.
	b) more than 10 dB(A) for a construction period of greater than four weeks, but not exceeding 26 weeks; and c) more than 5 dB(A) for a construction period greater than 26 weeks. Any activities that could exceed the construction noise objectives specified under this condition shall be identified and managed in accordance with a Construction Noise and Vibration Management Plan specified under Condition 6.3 d) of this approval. If the noise from construction is substantially tonal or impulsive in nature (as described in Chapter 4 of the NSW Industrial Noise Policy), 5dB(A) shall be added to the measured construction noise level when comparing the measured noise with the construction noise objectives. The Proponent shall implement all reasonable and feasible noise mitigation measures with the aim of achieving the construction noise objective.				The Woolgoolga to Halfway Ck CEMP, and in particular the Noise and Vibration Management Plan addresses these working hour constraints.
2.35	The Proponent shall ensure that all lighting installed as part of the rest area is mounted, screened, and directed in such a manner so as to minimise light spillage and/or glare to surrounding land uses. The lighting shall be the minimum level of illumination necessary, and generally in accordance with the latest version of AS 4282 – 1997 Control of the Obtrusive Effects of Outdoor Lighting.	1	Pre-construction and Construction	RMS and Contractor	The lighting design for the rest area shall be verified and certified by the contractor in accordance with G1.26
2.36	During the detailed design phase of the rest area, consideration shall be given to the installation of a rainwater tank(s) and any associated plumbing works to flush amenities.	1	Pre-construction	RMS	A rainwater tank is included in the rest area design and will be plumbed to the toilet facilities.
2.37	The Proponent shall, prior to the commencement of construction, or unless otherwise agreed by the Director-General, prepare and implement a Landscape Plan for the rest area site. In preparing the Plan, the Proponent shall consult with Coffs Harbour City Council. The Plan shall detail landscaping measures to minimise the impacts of the rest area on receptors in the vicinity of the site. The Plan shall include, but not necessarily be limited to:	1	Pre-construction	RMS	A landscape plan has been prepared in accordance with these conditions. All landscape plans for sections 1 and 2 have been provided to Coffs Harbour City Council, however no response has been received.
	a) details of noise mounds; b) details of landscaping, including swales and bioretention systems, to meet the outcomes of Scenario 2 as described in the Response to Submissions dated 3 July 2012; c) measures to monitor and maintain landscaping (including weed control) including responsibilities, timing, duration and contingencies where landscaping measures fail; and d) details of information boards, bicycle racks and other structures.				The ongoing maintenance of the rest area will be in accordance with the handover report and RMS's maintenance unit.
2.38	Conditions 6.2 and 6.3 may be satisfied through the submission of an addendum to the Construction Environment Management Plan and associated sub plans for the project to include the Arrawarra Rest Area. The updated plans shall be submitted for the approval of the Director-General no later than one month prior to the commencement of construction of the rest area, or within such period otherwise agreed by the Director-General. Construction of the rest area shall not commence until written approval has been received from the Director-General or nominee.	1	Pre-construction and Construction	RMS	The CEMP as associated plans were submitted to DP&E for approval on 1/05/15. These plans include the construction of the Arrawarra Rest Area. Section 1 CEMP was approved by the Secretary on the 15/5/15.
2.39	Prior to the operation of the Arrawarra Rest Area, the proponent shall incorporate the rest area into the existing environmental management systems.	1	Construction and Operation	RMS	The ongoing maintenance of the rest area will be in accordance with the handover report and RMS's maintenance unit.
2.40	The Biodiversity Offset and Mitigation Package as required by condition 2.13 shall be updated to include vegetation cleared as a result of the construction of the Arrawarra Rest Area.	1	Construction and	RMS	Offsetting of clearing associated with the Arrawarra Rest Area has been captured
			Operation		within the W2B Biodiversity Offset Strategy.

SPIR-WM3	Waste	Where possible, materials will be bought in bulk to minimise the amount of package required. Sources of material that have sustainable packaging design, recycled and	All	All	Construction	Pacific Complete/ Contracto	r All materials are purchased in bulk to reduce packaging.
SPIR-WM4	Waste	recyclable packaging will be favoured over other material sources where cost effective.	\\\\\\\\	All	Outoudclion	aomo compiete/ contracto	i i i i i i i i i i i i i i i i i i i
		Waste material generated on-site (including chemical, fuel and lubricant containers, and solid and liquid wastes) will be classified and disposed of in accordance with the	All	All	Construction	Pacific Complete/ Contracto	
SPIR-WM5	Waste	Protection of the Environment Operations Act 1997 and Waste Classification Guidelines Part 1: Classifying Waste (DECCW, 2009).					classifications.
5 771110			All	All	Construction	Pacific Complete/ Contracto	There is a focus on waste reduction, for example reducing the amount of fabric to cover
		Waste minimisation and management measures will be developed based on the principles in the Waste Avoidance and Resource Recovery Act 2001, the NSW				· ·	batters, where a binder can be used instead. Reusing fabric multiple times occurs regularly.
		Government's Waste Reduction and Purchasing Policy, and waste exemptions including: • Excavated Natural Material Exemption (EPA, 2008)).					Not over ordering of materials also occurs by stringent procurement process. There are minimal wastes which are transported offsite.
		Excavated Public Road Material Exemption (EPA, 2012)).					manus mastes millori are transported unsite.
		Raw Mulch Exemption (EPA, 2008). Replained Applet Bourgast Exemption (ERA, 2012).					
		Reclaimed Asphalt Pavement Exemption (EPA, 2012). Recovered Aggregate Exemption (EPA, 2010).					
		Stormwater Exemption (EPA, 2008).					
CDID MANAG	Woots	Treated Drilling Mud Exemption (EPA, 2011). Macause each to pusid minimize to use require treater dispose of waste streams during construction and address transport and disposed arrangements.					
SPIR-WM6	Waste	Measures seek to avoid, minimise, re-use, recycle, treat or dispose of waste streams during construction and address transport and disposal arrangements. Millable timber will be harvested for reuse off site. All other felled timber will be reused on-site in the form of habitat recreation or mulch in landscaping and erosion and	All	All	Construction	Pacific Complete/ Contracto	r Millable timber has been harvested for offsite use including blueberry poles, cogeneration
		sedimentation controls. Where mulch cannot be reused on-site, consideration will be given to making the mulch available to the public in accordance with the Roads and	1		2		plant, & firewood. The project have a project Raw Much Exemption which has been regularly
SPIR-WM7	Waste	Maritime Environmental Direction 25 (2012) and the Raw Mulch Exemption (EPA, 2008).	A II	A 11	0	0	applied for various landowners.
SPIR-WM8	Waste	Sediment removed from sedimentation basins will be used, where appropriate, on-site in landscaping and/or flattening of batters.	All	All	Construction	Contractor	Desilting sedimentation basins continues to ensure the design capacity is maintained, whereby sediment was reused into earthworks, fill, etc
		Where feasible, the contractor will be required to re-use materials. This could include, but is not limited to, concrete formwork or surplus concrete pours.	All	All	Construction	Contractor	Reuse of concrete, timber, plastic, fabric regularly occurs on the project within the various
SPIR-WM9	Waste	withere readules, the contractor will be required to re-use materials. This could include, but is not limited to, concrete formwork or surplus concrete pours.	A.II	***		D#-0. 1.12	disciplines ie structures, earthworks, etc
SPIR-WM10	Waste	Site inductions and on-site training will be required to include waste minimisation principles and measures.	All	All	Construction	Pacific Complete/ Contracto	r The project induction includes a component on waste management.
		At site compounds, on-site recycling facilities will be provided for recycling paper, plastic, glass and other re-useable materials.	All	All	Construction	Pacific Complete/ Contracto	r There are recycling facilities at each compound area.
SPIR-WM11	Waste	na one compositios, on site recycling racinities will be provided for recycling paper, plastic, glass and other re-useable materials.	A.II	***		<u> </u>	
SPIR-WM12	Waste	Regular visual inspections will be conducted to ensure that work sites are kept tidy and to identify opportunities for reuse and recycling.	All	All	Construction	Pacific Complete/ Contracto	r Site housekeeping is regularly discussed at daily toolboxes, induction, pre-starts and
